W. John Layng, Assistant Commissioner

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Subscription price per year $15 domestic, and $18.75 foreign. Single copy $2.25. Send correspondence on circulation and subscription matters (including address changes) to the Superintendent of Documents.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Controlled circulation postage paid at Riverdale, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) rose 1.4 percent before seasonal adjustment in January to 233.2 (1967=100).. The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also increased 1.4 percent before seasonal adjustment in January to 233.3 (1967=100). The CPI-U was 13.9 percent higher and the CPI-W was 14.0 percent higher than in January 1979.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI-U rose 1.4 percent in January. This compares with an increase of 1.2 percent in December and an average monthly increase of slightly more than 1.0 percent during 1979. All major components of the CPI, except food, advanced sharply in January. The largest increase was in the transportation component, which advanced sharply, primarily due to a 7.4 percent increase in gasoline prices. The housing component continued to increase substantially, reflecting higher household fuel and homeownership prices. On the other hand, the food and beverages index rose 0.1 percent in January, following a 1.4 percent rise in December.

The sharp rise in gasoline prices accounted for almost three-fourths of the 3.1 percent increase in the transportation index in January. Prices for other petroleum products, such as motor oil and coolant, also rose substantially—2.4 percent—in January. Prices for new cars advanced 1.4 percent, compared with an increase of 0.2 percent in December. Used car prices rose 1.1 percent, following seasonal adjustment, the fourth consecutive increase following 7 months of declining prices. The index for public transportation continued to increase substantially but less than in November and December.

The 1.4 percent increase in the housing index continued the sharp upward trend evident throughout 1979. In January, home financing costs rose 3.6 percent, reflecting an increase of 3.0 percent in mortgage interest rates and 0.9 percent in house prices. The index for property insurance increased 1.5 percent. (The 12-month percent changes for five experimental measures of housing costs can be found in tables C and D.) In January, prices for household fuels rose 2.0 percent, following a 1.6 percent increase in December. Fuel oil prices rose 5.3 percent, compared with an average monthly increase of about 1.4 percent during the fourth quarter of 1979. The index for gas and electricity rose 0.8 percent in January.

The 0.1 percent increase in the January index for food and beverages was the smallest since last August. Prices for grocery store foods declined 0.2 percent, following seasonal adjustment, primarily due to sharp declines in prices for eggs and most fresh fruits and vegetables. Beef and pork prices increased, but by much less than in December. Poultry prices rose sharply for the third consecutive month. The index for cereal and bakery products rose 1.1 percent, following a 1.3 percent increase in

NOTE: Seasonal adjustment factors have been recalculated to reflect developments during 1979. For this reason, some seasonally adjusted figures in this report differ from those previously reported.

December. Most other grocery store foods showed moderate increases in January. Prices of the other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 1.0 and 0.7 percent, respectively, in January.

The medical care index rose 1.3 percent in January, following a 1.1 percent increase in December. Professional services rose 1.3 percent as fees for physicians' services rose 1.4 percent and dental services advanced 1.3 percent. Charges for hospital rooms rose 0.9 percent. The index for medical care commodities rose 0.8 percent, about the same as in November and December.

The index for apparel and upkeep rose 0.9 percent in January, following seasonal adjustment, compared with 0.6 percent in December. Charges for apparel services rose 1.9 percent in January, following a 1.1 percent increase in December. Prices for women's and girls', and men's and boys' clothing and footwear rose moderately, after seasonal adjustment, while prices for infants' and toddlers' clothing declined.

The index for entertainment rose 1.0 percent in January, compared with an average monthly increase of 0.6 percent during 1979. Higher prices for entertainment commodities—reading materials, sporting goods and equipment, and toys, hobbies, and other entertainment goods—were primarily responsible for the increase.

The index for other goods and services rose 1.1 percent in January, largely due to a 2.6 percent increase in cigarette prices and a 1.4 percent increase in prices for school books and supplies.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI-W rose 1.4 percent in January. This compares with a 1.2 percent increase in December and an average monthly increase of slightly more than 1.0 percent during 1979. All major components of the CPI advanced sharply in January, except for food. The largest increase was in the transportation component, which advanced sharply primarily due to a 7.2 percent increase in gasoline prices. The housing component continued to increase substantially, reflecting higher fuel and homeownership prices. On the other hand, the food and beverages index rose 0.2 percent in January, following a 1.4 percent rise in December.

The 3.1 percent rise in the transportation index was primarily due to the sharp rise in gasoline prices, which accounted for almost three-fourths of the increase. Prices for other petroleum products, such as motor oil and coolant, rose substantially—up 2.6 percent—in January. Prices for new cars advanced 1.4 percent, following no change in December. Used car prices rose 1.0 percent, following seasonal adjustment, the fourth consecutive increase. The index for public transportation continued to increase substantially, but less than in November and December.

The 1.5 percent increase in the housing index continued the sharp upward trend evident throughout 1979. In January, home financing costs rose 3.6 percent, reflecting an increase of 3.0 percent in mortgage interest rates and 0.9 percent in house prices. The index for property insurance increased 1.3 percent. In January, prices for household fuels rose 2.0 percent, following a 1.6 percent increase in December. Fuel oil prices rose 5.3 percent, compared with an average monthly increase of over 4.0 percent during 1979. The index for gas and electricity rose 0.8 percent in January.

The 0.2 percent increase in the January index for food and beverages was the smallest since last August. Prices for grocery store foods declined 0.2 percent, following seasonal adjustment, primarily due to sharp declines in prices for eggs and most fresh fruits and vegetables. Beef prices increased but by much less than in December while poultry prices rose sharply for the third consecutive month. Prices of the other two components of the food and beverage index--restaurant meals and alcoholic beverages--rose 1.1 and 0.6 percent, respectively, in January.

The medical care index rose 1.3 percent in January, following a 1.1 percent increase in December. Professional services rose 1.4 percent as fees for both physicians' services and dental services advanced 1.5 percent. Charges for hospital rooms rose 0.8 percent. The index for medical care commodities rose 0.6 percent, somewhat less than in November and December.

The index for apparel and upkeep rose 0.8 percent in January, following seasonal adjustment, compared with 0.5 percent in December. Charges for apparel services rose 1.6 percent in January. Prices for women's and girls' and men's and boys' clothing and footwear rose moderately, after seasonal adjustment, while prices for infants' and toddlers' clothing declined.

The index for entertainment rose 0.8 percent in January, compared with an average monthly increase of 0.5 percent during 1979. Higher prices for reading materials were primarily responsible for the increase.

The index for other goods and services rose 1.4 percent in January, largely due to a 2.8 percent increase in cigarette prices and a 1.4 percent increase in prices for school books and supplies.

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas priced on pricing schedule 2 (See table 13) will appear next month.

[2] Indexes on an October 1967 = 100 base unless otherwise indicated.

[3] Indexes on a November 1977 = 100 base unless otherwise indicated.

[4] Index on a June 1978 = 100 base in Miami, Fla.; formerly on a November 1977 = 100 base.

[5] Indexes on a June 1978 = 100 base in Cincinnati, Ohio-Ky.-Ind. and Miami, Fla.; formerly on the bases listed in footnote 6. Index on a January 1978 = 100 base in Denver-Boulder, Col.

[6] Indexes are on the bases listed :

Anchorage, Alaska	January 1978 = 100.
Baltimore, Md	March 1978 = 100.
Boston, Mass	January 1978 = 100.
Cincinnati, Ohio-Ky.-Ind	March 1978 = 100.
Denver-Boulder, Colo	January 1978 = 100.
Miami, Fla	November 1977 = 100.
Milwaukee, Wis	November 1977 = 100.
Northeastern Pennsylvania	November 1977 = 100.
Portland, Oreg.-Wash	January 1978 = 100.
St. Louis, Mo.-Ill	March 1978 = 100.
San Diego, Calif	November 1977 = 100.
Seattle-Everett, Wash	November 1977 = 100.
Washington, D.C.-Md.-Va	November 1977 = 100.

[7] Indexes on a June 1978 = 100 base; formerly on the bases listed in footnote 6.

[8] The 1957-59 = 100 base is not available for San Diego, Calif.; index is on a February 1965 = 100 base.

[9] Index is on an April 1967 = 100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[10] Index on a June 1978 = 100 base in San Diego, Calif.; formerly on a November 1977 = 100 base.

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Revised index for December 1979.

[4] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas priced on pricing schedule 2 (See table 18) will appear next month.

[2] Indexes on an October 1967=100 base unless otherwise indicated.

[3] Indexes on a November 1977=100 base unless otherwise indicated.

[4] Index on a June 1978=100 base in Miami, Fla.; formerly on a November 1977=100 base.

[5] Indexes on a June 1978=100 base in Cincinnati, Ohio-Ky.-Ind. and Miami, Fla.; formerly on the bases listed in footnote 6. Index on a January 1978=100 base in Denver-Boulder, Col.

[6] Indexes are on the bases listed :

Anchorage, Alaska	January 1978=100.
Baltimore Md	March 1978=100.
Boston, Mass	January 1978=100.
Cincinnati, Ohio-Ky.-Ind	March 1978=100.
Denver-Boulder, Colo	January 1978=100.
Miami, Fla	November 1977=100.
Milwaukee, Wis	November 1977=100.
Northeastern Pennsylvania	November 1977=100.
Portland, Oreg.-Wash	January 1978=100.
St. Louis, Mo.-Ill	March 1978=100.
San Diego, Calif	November 1977=100.
Seattle-Everett, Wash	November 1977=100.
Washington, D.C.-Md.-Va	November 1977=100.

[7] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 6.

[8] The 1957-59=100 base is not available for San Diego, Calif.; index is on a February 1965=100 base.

[9] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[10] Index on a June 1978=100 base in San Diego, Calif.; formerly on a November 1977=100 base.

[1] Areas on pricing schedule 1 (See table 13) will appear next month.

[2] For the following areas the 1957-59=100 base is not available; indexes are on the bases listed:

Buffalo, N. Y.................................November 1963=100.
Dallas-Fort Worth, Tex................November 1963=100.
Honolulu, Hawaii..........................December 1963=100.

[3] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 4, except in Buffalo, N.Y. where 1967=100.

[4] Indexes are on the bases listed:

Atlanta, Ga....................................December 1977=100.
Buffalo, N. Y.................................February 1978=100.
Cleveland, Ohio............................February 1978=100.
Dallas-Fort Worth, Tex................February 1978=100.
Honolulu, Hawaii..........................December 1977=100.
Houston, Tex.................................April 1978=100.
Kansas City, Mo.-Kans................December 1977=100.
Minneapolis-St. Paul, Minn.-Wis..April 1978=100.
Pittsburgh, Pa...............................April 1978=100.
San Francisco-Oakland, Calif......December 1977=100.

[5] Indexes on a June 1978=100 base; formerly on the bases listed in Footnote 4.

[6] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 4, except in Minneapolis-St. Paul, Minn.-Wis. where 1967=100.

[1] Areas on pricing schedule 1 (See table 18) will appear next month.

[2] For the following areas the 1957-59=100 base is not available; indexes are on the bases listed:

Buffalo, N. Y. ....November 1963=100.
Dallas-Fort Worth, Tex. ....November 1963=100.
Honolulu, Hawaii ....December 1963=100.

[3] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 4, except in Buffalo, N.Y. where 1967=100.

[4] Indexes are on the bases listed:

Atlanta, Ga. ....December 1977=100.
Buffalo, N. Y. ....February 1978=100.
Cleveland, Ohio ....February 1978=100.
Dallas-Fort Worth, Tex. ....February 1978=100.
Honolulu, Hawaii ....December 1977=100.
Houston, Tex. ....April 1978=100.
Kansas City, Mo.-Kans. ....December 1977=100.
Minneapolis-St. Paul, Minn.-Wis. ....April 1978=100.
Pittsburgh, Pa. ....April 1978=100.
San Francisco-Oakland, Calif. ....December 1977=100.

[5] Indexes on a June 1978=100 base; formerly on the bases listed in Footnote 4.

[6] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 4, except in Minneapolis-St. Paul, Minn.-Wis. where 1967=100.

NA Data not adequate for publication.

Energy commodities	141.2	37.4	139.5	35.8	135.3	32.1	140.1	33.4
Services less energy	113.0	8.7	118.9	12.6	118.1	11.8	117.3	11.5

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined below:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

Table 24A. Consumer Price Index for All Urban Consumers: Population size class[1], by expenditure category and commodity and service group, Annual averages, 1979, and percent changes, 1978 to 1979, December 1977=100 unless otherwise noted

---

[1] The population size classes are aggregations of areas which have urban population as defined below:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

Table 25A. Consumer Price Index for All Urban Consumers: Cross classification of region and population size class[1], by expenditure category and commodity and service group, Annual averages, 1979, and percent changes, 1978 to 1979, December 1977=100 unless otherwise noted

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined below:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

NA Data not adequate for publication.

Table 26A. Consumer Price Index for Urban Wage Earners and Clerical Workers: Region[1], by expenditure category and commodity and service group, Annual averages, 1979, and percent changes, 1978 to 1979, December 1977 = 100 unless otherwise noted

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined below:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

Table 27A. Consumer Price Index for Urban Wage Earners and Clerical Workers: Population size class[1], by expenditure category and commodity and service group, Annual averages, 1979, and percent changes, 1978 to 1979, December 1977 = 100 unless otherwise noted

[1] The population size classes are aggregations of areas which have urban population as defined below:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

Table 28A. Consumer Price Index for Urban Wage Earners and Clerical Workers: Cross classification of region and population size class[1], by expenditure category and commodity and service group, Annual averages, 1979, and percent changes, 1978 to 1979, December 1977=100 unless otherwise noted

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined below:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

NA Data not adequate for publication.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from over 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 22 percent, for example, is shown as 122.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $12.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), and *Revisions in the Medical Care Service component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978.

A Note About Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	189.8
Less previous index	189.2
Equals index point change:	0.6
Percent Change	
Index point difference	0.6
Divided by the previous index	189.2
Equals:	0.003
Results multiplied by one hundred	0.003×100
Equals percent change:	0.3

A Note on Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1975 through 1979 will be replaced at the end of 1978. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components.

Explanation of Homeownership Measures

Official CPI-U includes five components.(1) The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home, and the total amount of interest expected to be paid over half the stated life of the mortgage. (2) Current monthly prices are used for each of these components.

Experimental Measure X-1: (1) The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. (2) Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: (1) The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owned and the equity component is the amount owed, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. (2) Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: (1) The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowners population. (2) The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3, uses past and current mortgage interest costs in a 15-year weighted moving average, which reflects the base period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) The prices used for each of these items are current ones.

Experimental Measure X-5: (1) The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) Current prices are used in X-5 except for mortgage interest which uses the 15-year moving average also used in the X-3.

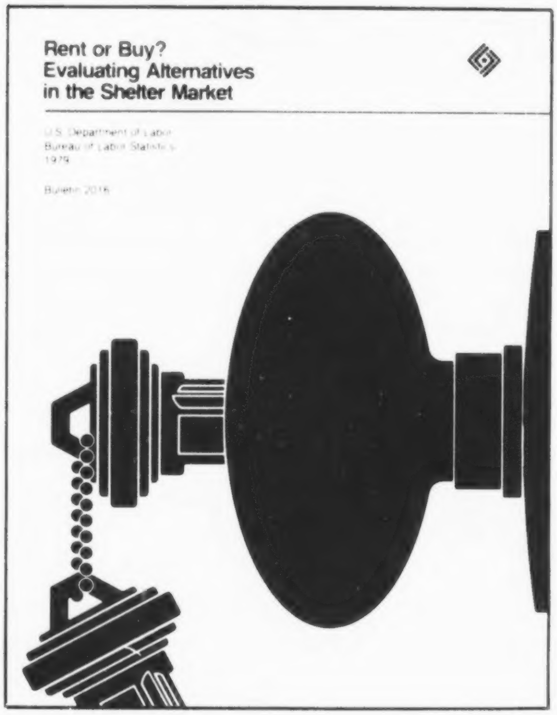
Rent or Buy? Evaluating Alternatives in the Shelter Market



Rent or Buy?
Evaluating Alternatives
in the Shelter Market

U.S. Department of Labor
Bureau of Labor Statistics
1979

Bulletin 2016

"Rent or Buy? Evaluating Alternatives in the Shelter Market" helps a person or family compare the financial aspects of owning and renting shelter suited to their needs. A step-by-step procedure for making the comparison is outlined and fully illustrated. Space is provided to help determine:

- The monthly outlay to own a house of your choosing before and after tax saving from homeownership.
- The proceeds if you were to sell the house after a given period of time.
- The amount you can spend for rent and be as well-off financially after a given period of time as if you bought.

The pamphlet, first issued in 1974, has been updated to depict more recent economic conditions that affect shelter decisions.

Ray Marshall, Secretary

BUREAU OF LABOR STATISTICS
Janet L. Norwood, Commissioner

OFFICE OF PRICES AND LIVING CONDITIONS
W. John Layng, Assistant Commissioner

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Subscription price per year $15 domestic, and $18.75 foreign. Single copy $2.25. Send correspondence on circulation and subscription matters (including address changes) to the Superintendent of Documents.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Controlled circulation postage paid at Riverdale, Md.

Price Movements

The Consumer Price Index For All Urban Consumers (CPI-U) rose 1.4 percent before seasonal adjustment in February to 236.4 (1967=100). The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also increased 1.4 percent before seasonal adjustment in February to 236.5 (1967=100). The CPI-U was 14.1 percent higher and the CPI-W was 14.2 percent higher than in February 1979.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI-U rose 1.4 percent in February, the same as in January. This compares with an average monthly increase of slightly more than 1.0 percent during 1979. All major components of the CPI, except food and apparel, rose 1.0 percent or more for the second consecutive month, with rising energy and homeownership costs accounting for over two-thirds of the February increase.

The transportation component registered the largest increase as gasoline prices rose 7.3 percent, following a 7.4 percent increase in January. The housing component also continued to increase substantially, primarily reflecting higher mortgage interest rates and prices for household fuels. The food and beverage index was unchanged in February, following a 0.1 percent increase in January.

The sharp rise in gasoline prices accounted for over four-fifths of the 2.8 percent increase in the transportation index in February. Prices for other petroleum products, such as motor oil and coolant, also rose substantially—2.5 percent—in February. Prices for new cars advanced 1.2 percent, following an increase of 1.4 percent in January. Used car prices declined 0.5 percent. Automobile finance charges continued to increase sharply—up 1.7 percent—and charges for automobile insurance rose 1.3 percent. The index for public transportation continued to increase substantially, but the rise was the smallest since last June.

The 1.4 percent increase in the housing index continued the sharp upward trend evident since early 1979. In February, home financing costs rose 2.9 percnet, reflecting an increase of 2.2 percent in mortgage interest rates and 0.4 percent in house prices. The increase in house prices was the smallest since August 1978. The indexes for both property insurance and household maintenance and repairs increased 1.5 percent. The 12-month percent changes for five experimental measures of housing costs can be found in tables C and D. In February, prices for household fuels rose 2.9 percent. Fuel oil prices rose 5.1 percent, following a 5.3 percent increase in January, and the index for gas and electricity rose 2.1 percent.

The index for grocery store foods declined 0.4 percent in February, after seasonal adjustment, following a decline of 0.2 percent in January. The decrease was due primarily to sharp declines in the prices for fresh vegetables, pork, poultry, and eggs. These declines were partially offset by increases in most other grocery store foods. Prices for

cereal and bakery products, sugar, and carbonated drinks continued to increase sharply. Prices of the other two components of the food and beverage index——restaurant meals and alcoholic beverages——rose 0.7 and 0.4 percent, respectively, in February.

The medical care index increased 1.5 percent in February continuing the acceleration evident during the past several months. Professional services rose 1.7 percent as fees for physicians' services rose 1.6 percent and dental services advanced 1.8 percent. Charges for hospital rooms also rose sharply, up 1.6 percent in February.

The index for apparel and upkeep rose 0.6 percent, following an increase of 0.9 percent in January. Prices for jewelry, luggage, and sewing materials combined rose 3.8 percent and accounted for over two-thirds of the apparel increase. Increases in prices for precious metals and petroleum based materials were primarily responsible for the rise. Clothing prices were about unchanged on average in February. Apparel services continued to increase but not by as much as in January.

The index for entertainment rose 1.2 percent in February, following a 1.0 percent increase in the preceding month. Higher prices for sporting goods and equipment, and toys, hobbies, and other entertainment goods were primarily responsible for the increase.

The other goods and services component rose 1.0 percent in February, following an increase of 1.1 percent in January. The increase was largely due to higher prices for banking and personal care services.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)——seasonally adjusted changes

On a seasonally adjusted basis, the CPI-W rose 1.4 percent in February, the same as in January. This compares with an average monthly increase of slightly more than 1.0 percent during 1979. All major components of the CPI-W, except for food and apparel, rose 1.0 percent or more for the second consecutive month, with rising energy and homeownership costs accounting for over two-thirds of the February increase.

The transportation component registered the largest increase as gasoline prices rose 7.3 percent, following a 7.2 percent increase in January. The housing component also continued to increase substantially, primarily reflecting higher mortgage interest rates and costs for household fuels. The food and beverage index was unchanged in February, following a 0.2 percent increase in January.

The sharp rise in gasoline prices accounted for over four-fifths of the 2.8 percent increase in the transportation index in February. Prices for new cars advanced 1.2 percent, following an increase of 1.4 percent in January. Used car prices declined 0.5 percent. Automobile finance charges continued to increase sharply——up 1.5 percent——and automobile insurance rose 1.2 percent. The index for public transportation rose 0.9 percent in February, the smallest rise since last June.

The 1.4 percent increase in the housing index continued the sharp upward trend evident since early 1979. In February, home financing costs rose 2.9 percent, reflecting an increase of 2.3 percent in mortgage interest rates and 0.3 percent in house prices. The house price increase was the smallest since August 1978. The index for property insurance increased 1.5 percent in February, following a 1.3 percent increase in January. In February, prices for household fuels rose 2.8 percent. Fuel oil prices rose 5.2 percent, following a 5.3 percent increase in January, and the index for gas and electricity rose 2.0 percent.

The index for grocery store foods declined 0.3 percent in February, after seasonal adjustment, following a decline of 0.2 percent in January. The decrease was due primarily to a sharp decline in the prices for fresh vegetables, pork, poultry, and eggs. These declines were partially offset by increases in most other grocery store foods. Prices for cereal and bakery products, sugar, and carbonated drinks continued to increase sharply. Prices of the other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.5 and 0.7 percent, respectively, in February.

The medical care index increased 1.5 percent in February, continuing the acceleration evident during the past several months. Professional services rose 1.6 percent as fees for physicians' services rose 1.5 percent and dental services advanced 1.7 percent.

The index for apparel and upkeep rose 0.9 percent, following an increase of 0.8 percent in January. Prices for jewelry, luggage, and sewing materials rose 3.4 percent and accounted for over one-third of the apparel increase. Increases in prices for precious metals and petroleum based materials were primarily responsible for the increase. Prices for women's and girls' and infants' and toddlers' clothing also advanced in February. Charges for apparel services continued to increase but not by as much as in January.

The index for entertainment rose 1.2 percent in February, following a 0.8 percent increase in the preceding month. Higher prices for sporting goods and equipment, and toys, hobbies, and other entertainment goods were primarily responsible for the increase.

The other goods and services component rose 0.9 percent in February, compared with an increase of 1.4 percent in January. The February increase was largely due to a 3.1 percent increase in the index for personal expenses, primarily banking services.

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

South/D	-.1	.3	-1.4	.5	-1.0	1.4
West/D	-.2	.6	-1.8	.2	-1.9	2.3

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas on pricing schedule 1 (See table 13) will appear next month.

[2] For the following areas the 1957-59=100 base is not available; indexes are on the bases listed:

Buffalo, N. Y. .... November 1963=100.
Dallas-Fort Worth, Tex. .... November 1963=100.
Honolulu, Hawaii .... December 1963=100.

[3] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 4, except in Buffalo, N.Y. where 1967=100.

[4] Indexes are on the bases listed:

Atlanta, Ga. .... December 1977=100.
Buffalo, N. Y. .... February 1978=100.
Cleveland, Ohio .... February 1978=100.
Dallas-Fort Worth, Tex. .... February 1978=100.
Honolulu, Hawaii .... December 1977=100.
Houston, Tex. .... April 1978=100.
Kansas City, Mo.-Kans. .... December 1977=100.
Minneapolis-St. Paul, Minn.-Wis. .... April 1978=100.
Pittsburgh, Pa. .... April 1978=100.
San Francisco-Oakland, Calif. .... December 1977=100.

[5] Indexes on a June 1978=100 base; formerly on the bases listed in Footnote 4.

[6] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 4, except in Minneapolis-St. Paul, Minn.-Wis. where 1967=100.

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas on pricing schedule 1 (See table 18) will appear next month.

[2] For the following areas the 1957-59 = 100 base is not available; indexes are on the bases listed:

Buffalo, N. Y. .... November 1963 = 100.
Dallas-Fort Worth, Tex. .... November 1963 = 100.
Honolulu, Hawaii .... December 1963 = 100.

[3] Indexes on a June 1978 = 100 base; formerly on the bases listed in footnote 4, except in Buffalo, N.Y. where 1967 = 100.

[4] Indexes are on the bases listed:

Atlanta, Ga. .... December 1977 = 100.
Buffalo, N. Y. .... February 1978 = 100.
Cleveland, Ohio .... February 1978 = 100.
Dallas-Fort Worth, Tex. .... February 1978 = 100.
Honolulu, Hawaii .... December 1977 = 100.
Houston, Tex. .... April 1978 = 100.
Kansas City, Mo.-Kans. .... December 1977 = 100.
Minneapolis-St. Paul, Minn.-Wis. .... April 1978 = 100.
Pittsburgh, Pa. .... April 1978 = 100.
San Francisco-Oakland, Calif. .... December 1977 = 100.

[5] Indexes on a June 1978 = 100 base; formerly on the bases listed in Footnote 4.

[6] Indexes on a June 1978 = 100 base; formerly on the bases listed in footnote 4, except in Minneapolis-St. Paul, Minn.-Wis. where 1967 = 100.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

[NA] Data not adequate for publication.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Revised indexes for December 1979:

Entertainment	110.5
Entertainment services	111.5
Other services	115.1

[3] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Revised indexes for December 1979:

Entertainment	110.9
Entertainment services	114.5
Other services	115.8

[3] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Revised index for entertainment: 12/79 = 110.4

[3] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

[NA] Data not adequate for publication.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from over 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 22 percent, for example, is shown as 122.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $12.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), and *Revisions in the Medical Care Service component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change

CPI	189.8
Less previous index	189.2
Equals index point change:	0.6

Percent Change

Index point difference	0.6
Divided by the previous index	189.2
Equals:	0.003
Results multiplied by one hundred	0.003×100
Equals percent change:	0.3

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1975 through 1979 will be replaced at the end of 1978. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components.

Explanation of Homeownership Measures

Official CPI-U includes five components.(1) The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home, and the total amount of interest expected to be paid over half the stated life of the mortgage. (2) Current monthly prices are used for each of these components.

Experimental Measure X-1: (1) The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. (2) Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: (1) The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owned and the equity component is the amount owed, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. (2) Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: (1) The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowners population. (2) The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3, uses past and current mortgage interest costs in a 15-year weighted moving average, which reflects the base period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) The prices used for each of these items are current ones.

Experimental Measure X-5: (1) The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, propperty insurance, maintenance, and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) Current prices are used in X-5 except for mortgage interest which uses the 15-year moving average also used in the X-3.

U.S. Department of Labor

Bureau of Labor Statistics

Employment and Earnings... gives current employment and earnings statistics for the Nation as a whole, for individual States, and for more than 200 areas. Included are household and establishment data, seasonally and not seasonally adjusted. **$22 a year.**

Current Wage Developments... reports on specific wage and benefit changes from collective bargaining agreements. Includes data on strikes or lockouts, major agreements expiring, and statistics on compensation changes. **$12 a year.**

CPI Detailed Report... is the most comprehensive report on monthly consumer price indexes and rates of change. Includes data on commodity and service groups for 23 cities. **$15 a year.**

Monthly Labor Review... the oldest and most authoritative Government research journal in economics and social sciences. Regular features include reviews of books, developments in industrial relations, labor cases. **$18 a year.**

Producer Prices and Price Indexes... Includes price movements of industrial commodities and farm products, processed foods and feeds. Tables and charts give greater detail than available in other published material. **$17 a year.**

Occupational Outlook Quarterly... helps students and guidance counselors learn about new occupations, training opportunities, salary trends, and career counseling programs. Written in nontechnical language and illustrated in color. **$6, four issues.**

Subscriptions to BLS periodicals are available from Superintendent of Documents, Government Printing Office, Washington, D.C. 20402. For subscriptions to foreign countries, add 25 percent to all prices. Make all checks payable to the Superintendent of Documents.

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Subscription price per year $15 domestic, and $18.75 foreign. Single copy $2.25. Send correspondence on circulation and subscription matters (including address changes) to the Superintendent of Documents.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Controlled circulation postage paid at Riverdale, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) rose 1.4 percent before seasonal adjustment in March to 239.8 (1967 = 100). The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also increased [5] .4 percent before seasonal adjustment in March to 239.9 (1967 = 100). The CPI-U was 14.7 percent higher and the CPI-W was 14.6 percent higher than in March 1979.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes.

On a seasonally adjusted basis, the CPI-U rose 1.4 percent in March, the same as in January and February. During the 3 months ended in March, the CPI-U rose at a seasonally adjusted annual rate of 18.1 percent. This compares with increases of about 13 percent in each of the 4 quarters of 1979. Food and beverage prices advanced sharply in March, following 2 months of very little change. The index for apparel and upkeep also accelerated in March, increasing 2.0 percent. The housing component of the CPI rose somewhat more than in February as a smaller increase in household fuel prices was more than offset by a sharp increase in mortgage interest rates. The transportation component rose noticeably less than in February as the rate of advance in gasoline prices slowed substantially. The medical care and other goods and services components also rose less than last month, while the entertainment index continued to increase about the same as in February.

The index for grocery store foods rose 1.1 percent in March, following declines in both January and February. The rise was primarily due to increases in the prices for beef, eggs, and fresh fruits and vegetables. Prices for sugar rose sharply for the third consecutive month. On the other hand, most other major components of grocery store foods registered more moderate price increases in March than in February. Prices of the other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.8 and 0.5 percent, respectively, about the same as in February.

The 1.6 percent increase in the housing index continued the sharp upward trend evident since early 1979. In March, home financing costs rose 4.5 percent, reflecting an increase of 3.9 percent in mortgage interest rates and 0.4 percent in house prices. The increase in house prices, the same as in February, was the second consecutive moderate rise following large increases in each of the previous 12 months. The index for household maintenance and repairs increased 1.7 percent, following a 1.5 percent increase in February. (The 12-month percent changes for five experimental measures of housing costs can be found in tables C and D. In March, prices for household fuels rose 2.1 percent. Fuel oil prices rose 2.8 percent, following increases of over 5 percent in both January and February. The index for gas and electricity rose 1.9 percent in March.

Gasoline prices advanced 3.9 percent in March,

substantially less than in January and February. Prices for other petroleum products, such as motor oil and coolant, rose substantially—2.0 percent—in March. Prices for new cars rose 0.3 percent, following seasonal adjustment, compared with increases of over 1.0 percent in both January and February. Used car prices declined 1.2 percent. Automobile finance charges continued to increase sharply—up 4.0 percent—and charges for automobile insurance rose 1.6 percent. The index for public transportation increased 1.1 percent, about the same as in February.

The index for apparel and upkeep rose 2.0 percent in March, compared with 0.6 percent in February. All clothing prices—men's and boys', women's and girls', and infants' and toddlers'—rose sharply as higher priced spring and summer wear items were introduced. Prices for other apparel commodities continued to advance sharply, primarily reflecting earlier increases in the prices of precious metals. Apparel services also continued to increase notably—up 1.3 percent in March.

The 0.9 percent increase in the medical care index was less than in recent months. Professional services rose 1.0 percent as fees for physicians' services rose 0.8 percent and dental services advanced 1.1 percent. Charges for hospital rooms rose 0.9 percent in March, following a 1.6 percent increase in February.

The index for entertainment rose 1.3 percent in March, slightly more than in January and February. The indexes for entertainment commodities—reading materials, sporting goods and equipment, and toys and hobbies—and for entertainment services both registered increases of 1.3 percent.

The other goods and services component rose 0.5 percent in March, following substantially larger increases earlier this year. Tobacco products, personal care items, and educational expenses all registered more moderate increases in March.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI-W rose 1.4 percent in March, the same as in January and February. Food and beverage prices advanced sharply, following 2 months of very little change. The index for apparel and upkeep also rose sharply in March, increasing 1.7 percent. The housing component of the CPI rose somewhat more than in February, as a smaller increase in household fuel prices was more than offset by a sharp increase in mortgage interest rates. The transportation component rose noticeably less than in February as the rate of increase in gasoline prices slowed substantially. The medical care and other goods and services components also rose less than last month, while the index for entertainment continued to increase about the same as in February.

The index for grocery store foods rose 1.0 percent in March, following declines in both January and February. The rise was primarily due to increases in the prices for eggs and for fresh fruits and vegetables, both of which had registered declines over the first 2 months of 1980. Prices for sugar and sweets also rose sharply for the third consecutive month. Prices of the other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.9 and 0.6 percent, respectively.

The 1.6 percent increase in the housing index continued the sharp upward trend evident since early 1979. In March, home financing costs rose 4.5 percent, reflecting an increase of 3.9 percent in mortgage interest rates and 0.3 percent in house prices. The increase in house prices, the same as in February, was the second consecutive moderate rise following large increases in each of the previous 12 months. The index for household maintenance and repairs increased 1.3 percent, following increases of 1.1 percent in both January and February. In March, prices for household fuels rose 2.1 percent. Fuel oil prices rose 2.7 percent, following increases of over 5 percent in both January and February. The index for gas and electricity rose 1.9 percent in March.

Gasoline prices advanced 4.0 percent in March, substantially less than in January and February. Prices for other petroleum products, such as motor oil and coolant, also rose substantially—1.7 percent—in March. Prices for new cars rose 0.5 percent, following seasonal adjustment, compared with increases of over 1.0 percent in both January and February. Used car prices declined 1.2 percent. Automobile finance charges continued to increase sharply—up 3.0 percent—charges for automobile insurance rose 1.7 percent. The index for public transportation also continued to increase substantially.

The index for apparel and upkeep rose 1.7 percent in March, compared with 0.9 percent in February. All clothing prices—men's and boys', women's and girls', and infants' and toddlers'—rose sharply as higher priced spring and summer wear items were introduced. Prices for other apparel commodities continued to advance sharply, primarily reflecting earlier increases in the prices of precious metals. Apparel services also continued to increase notably—up 1.7 percent in March.

The 0.9 percent increase in the medical care index was less than in recent months. Professional services rose 0.9 percent as fees for physicians' services rose 0.8 percent and dental services advanced 1.0 percent. Charges for hospital rooms rose 0.9 percent in March, the same as in February.

The index for entertainment rose 1.6 percent in March. The index for entertainment commodities—reading materials, sporting goods and equipment, and toys and hobbies—rose 1.5 percent, and charges for entertainment services increased 1.6 percent.

The other goods and services component rose 0.4 percent in March, following substantially larger increases earlier this year. The indexes for tobacco products, personal care items, and personal and educational expenses all registered more moderate increases in March.

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[7] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 6.

[8] The 1957-59=100 base is not available for San Diego, Calif.; index is on a February 1965=100 base.

[9] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[10] Index on a June 1978=100 base in San Diego, Calif.; formerly on a November 1977=100 base.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from over 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 22 percent, for example, is shown as 122.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $12.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), and *Revisions in the Medical Care Service component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change

CPI	189.8
Less previous index	189.2
Equals index point change:	0.6

Percent Change

Index point difference	0.6
Divided by the previous index	189.2
Equals:	0.003
Results multiplied by one hundred	0.003x100
Equals percent change:	0.3

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1976 through 1980 will be replaced at the end of 1980. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components.

Explanation of Homeownership Measures

Official CPI-U includes five components.(1) The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home, and the total amount of interest expected to be paid over half the stated life of the mortgage. (2) Current monthly prices are used for each of these components.

Experimental Measure X-1: (1) The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. (2) Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: (1) The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owned and the equity component is the amount owed, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. (2) Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: (1) The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowners population. (2) The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3, uses past and current mortgage interest costs in a 15-year weighted moving average, which reflects the base period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) The prices used for each of these items are current ones.

Experimental Measure X-5: (1) The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, propperty insurance, maintenance, and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) Current prices are used in X-5 except for mortgage interest which uses the 15-year moving average also used in the X-3.

Bulletin 2016

"Rent or Buy? Evaluating Alternatives in the Shelter Market" helps a person or family compare the financial aspects of owning and renting shelter suited to their needs. A step-by-step procedure for making the comparison is outlined and fully illustrated. Space is provided to help determine:

- The monthly outlay to own a house of your choosing before and after tax saving from homeownership.
- The proceeds if you were to sell the house after a given period of time.
- The amount you can spend for rent and be as well-off financially after a given period of time as if you bought.

The pamphlet, first issued in 1974, has been updated to depict more recent economic conditions that affect shelter decisions.

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Subscription price per year $15 domestic, and $18.75 foreign. Single copy $2.25. Send correspondence on circulation and subscription matters (including address changes) to the Superintendent of Documents.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Controlled circulation postage paid at Riverdale, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) rose 1.1 percent before seasonal adjustment in April to 242.5 (1967=100). The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also increased 1.1 percent before seasonal adjustment in April to 242.6 (1967=100). The CPI-U was 14.7 percent higher and the CPI-W was 14.5 percent higher than in April 1979.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers rose 0.9 percent in April. This compares with increases of 1.4 percent in each of the first three months of 1980 and an average monthly increase of slightly more than 1.0 percent during 1979. Much of the slowdown in April was due to smaller price increases for energy items, particularly gasoline. Smaller increases for food, clothing, and home financing costs also contributed to the slowdown.

The transportation index rose 0.6 percent in April, the smallest increase in almost two years. Gasoline prices were unchanged in April following a 3.9 percent rise in the previous month. Used car prices declined 1.8 percent. On the other hand new car prices rose 1.4 percent and automobile finance charges increased 8.2 percent in April. The index for public transportation increased 1.6 percent largely reflecting a 4.4 percent increase in taxi fares.

The sharp upward trend evident in the housing index since early 1979 continued in April, but the 1.3 percent increase was less than in March. In April, home financing costs rose 3.6 percent, following a 4.5 percent increase in March. Mortgage interest rates rose less than in March but house prices rose more. The index for household maintenance and repairs increased 1.4 percent and the index for household furnishings and operations rose 0.7 percent in April. (The 12-month percent changes for five experimental measures of housing costs can be found in tables C and D.) In April, prices for household fuels rose 1.2 percent. Fuel oil prices rose 0.5 percent, the smallest increase since the summer of 1978, and the index for gas and electricity rose 1.4 percent.

The index for food and beverages rose 0.5 percent in April. Prices for grocery store food increased 0.4 percent following a rise of 1.1 percent in March. A 1.3 percent decline in the index for meats, poultry, fish, and eggs, following a 1.0 percent increase in March, was largely responsible for the deceleration. The indexes for fruits and vegetables, cereal and bakery products, and dairy products registered larger increases in April than in March. Prices of the other two components of the food and beverage index—–restaurant meals and alcoholic beverages—–rose 0.7 and 1.1 percent, respectively in April.

The index for apparel and upkeep rose 0.3 percent in April, following an increase of 2.0 percent in March. Prices

Entertainment	.7	.5	–.1	.8	1.2	1.6	.8	15.0	8.5
Other goods and services	.2	.3	.6	1.4	.9	.4	.5	7.6	8.3

for most clothing items declined or registered substantially smaller increases in April than in March. The index for apparel services, however, rose 1.8 percent in April compared with 1.3 percent in March.

The index for medical care rose 0.7 percent in April compared with 0.9 percent in March. Charges for professional services rose 1.2 percent as fees for physicians' services rose 1.0 percent and dental services advanced 1.3 percent. Charges for hospital rooms rose 1.0 percent in April. The index for entertainment rose 0.8 percent in April, compared with an increase of 1.3 percent in March. The indexes for entertainment commodities––reading materials, sporting foods and equipment, and toys and hobbies––and for entertainment services both registered increases of 0.8 percent. The other goods and services component rose 0.6 percent in April, following an increase of 0.5 percent in March and increases of about 1.0 percent in both January and February.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)––seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 1.0 percent in April. This compares with increases of 1.4 percent in each of the first three months of 1980 and an average monthly increase of slightly more than 1.0 percent during 1979. Much of the slowdown in April was due to smaller price increases for energy items. Smaller increases in food, clothing, and home financing costs also contributed to the slowdown.

The transportation index rose 0.6 percent in April, the smallest increase in almost two years. Gasoline prices declined 0.1 percent in April, following a 4.0 percent increase in the previous month. Used car priced declined 1.7 percent. On the other hand, new car prices rose 1.6 percent and automobile finance changes increased 9.3 percent in April. The index for public transportation increased 1.6 percent largely reflecting a 4.1 percent increase in taxi fares.

The sharp uptrend evident in the housing index since early 1979 continued in April, but the 1.4 percent increase was less than in March. In April, home financing costs rose 3.7 percent, following a 4.5 percent rise in March. Mortgage interest rates rose less than in March but house prices rose more. The index for household maintenance and repairs increased 1.2 percent, and the index for household furnishings and operations rose 0.7 percent in April. In April, prices for household fuels rose 1.1 percent. Fuel oil prices rose 0.5 percent, the smallest increase since the summer of 1978 and the index for gas and electricity rose 1.3 percent.

The index for food and beverages rose 0.7 percent in April. Prices for grocery store food increased 0.5 percent following a rise of 1.0 percent in March. A 1.2 percent decline in the index for meats, poultry, fish, and eggs, following a 0.5 percent increase in March, was largely responsible for the deceleration. The indexes for fruits and vegetables and cereal and bakery products registered larger increases in April than in March. Prices of the other two components of the food and beverage index––restaurant meals and alcoholic beverages––rose 0.8 and 1.1 percent, respectively in April.

The index for apparel and upkeep rose 0.3 percent in April, following an increase of 1.7 percent in March. Prices for most clothing items declined or registered substantially smaller increases in April than in March. The index for apparel services, however, rose 1.1 percent in April, following an increase of 1.7 percent in March.

The index for medical care rose 0.8 percent in April compared with 0.9 percent in March. Charges for professional services rose 1.4 percent as fees for physicians' services rose 1.3 percent and dental services advanced 1.4 percent. Charges for hospital rooms rose 1.0 percent in April. The index for entertainment rose 0.8 percent in April, compared with an increase of 1.6 percent in March. The indexes for entertainment commodities—reading materials, sporting goods and equipment, and toys and hobbies—rose 1.0 percent and entertainment services increased 0.4 percent. The other goods and services component rose 0.5 percent in April, following an increase of 0.4 percent in March.

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

West/D	1.1	2.4	-.7	.6	5.6	.4

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas on pricing schedule 1 (See table 13) will appear next month.

[2] For the following areas the 1957-59=100 base is not available; indexes are on the bases listed:

Buffalo, N. Y.....November 1963=100.
Dallas-Fort Worth, Tex.....November 1963=100.
Honolulu, Hawaii.....December 1963=100.

[3] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 4, except in Buffalo, N.Y. where 1967=100.

[4] Indexes are on the bases listed:

Atlanta, Ga.....December 1977=100.
Buffalo, N. Y.....February 1978=100.
Cleveland, Ohio.....February 1978=100.
Dallas-Fort Worth, Tex.....February 1978=100.
Honolulu, Hawaii.....December 1977=100.
Houston, Tex.....April 1978=100.
Kansas City, Mo.-Kans.....December 1977=100.
Minneapolis-St. Paul, Minn.-Wis.....April 1978=100.
Pittsburgh, Pa.....April 1978=100.
San Francisco-Oakland, Calif.....December 1977=100.

[5] Indexes on a June 1978=100 base; formerly on the bases listed in Footnote 4.

[6] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 4, except in Minneapolis-St. Paul, Minn.-Wis. where 1967=100.

[NA] Data not adequate for publication.

North Central/D	2	12/77	-	126.2	-	129.1	12.7	2.3	-	-	-	-
South/D	2	12/77	-	125.9	-	128.3	13.4	1.9	-	-	-	-
West/D	2	12/77	-	127.3	-	130.1	14.8	2.2	-	-	-	-

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:
M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:
A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

Table 20. Consumer Price Index for Urban Wage Earners and Clerical Workers: Areas priced monthly, by expenditure category and commodity and service group, percent change from March 1980 to April 1980

Group	U.S. city average	Chicago, Ill.-Northwestern Ind.	Detroit, Mich.	Los Angeles-Long Beach, Anaheim, Calif.	New York, N.Y.-Northeastern N.J.	Philadelphia, Pa.-N.J.

[1] Areas on pricing schedule 1 (See table 18) will appear next month.

[2] For the following areas the 1957-59=100 base is not available; indexes are on the bases listed:

Buffalo, N. Y.	November 1963=100.
Dallas-Fort Worth, Tex.	November 1963=100.
Honolulu, Hawaii	December 1963=100.

[3] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 4, except in Buffalo, N.Y. where 1967=100.

[4] Indexes are on the bases listed:

Atlanta, Ga.	December 1977=100.
Buffalo, N. Y.	February 1978=100.
Cleveland, Ohio	February 1978=100.
Dallas-Fort Worth, Tex.	February 1978=100.
Honolulu, Hawaii	December 1977=100.
Houston, Tex.	April 1978=100.
Kansas City, Mo.-Kans.	December 1977=100.
Minneapolis-St. Paul, Minn.-Wis.	April 1978=100.
Pittsburgh, Pa.	April 1978=100.
San Francisco-Oakland, Calif.	December 1977=100.

[5] Indexes on a June 1978=100 base; formerly on the bases listed in Footnote 4.

[6] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 4, except in Minneapolis-St. Paul, Minn.-Wis. where 1967=100.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

[NA] Data not adequate for publication.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[NA] Data not adequate for publication.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from over 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 22 percent, for example, is shown as 122.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $12.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), and *Revisions in the Medical Care Service component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	236.4
Less previous index	233.2
Equals index point change:	3.2
Percent Change	
Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1976 through 1980 will be replaced at the end of 1980. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components.

Explanation of Homeownership Measures

Official CPI-U includes five components.(1) The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home, and the total amount of interest expected to be paid over half the stated life of the mortgage. (2) Current monthly prices are used for each of these components.

Experimental Measure X-1: (1) The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. (2) Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: (1) The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owned and the equity component is the amount owed, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. (2) Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: (1) The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowners population. (2) The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3, uses past and current mortgage interest costs in a 15-year weighted moving average, which reflects the base period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) The prices used for each of these items are current ones.

Experimental Measure X-5: (1) The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) Current prices are used in X-5 except for mortgage interest which uses the 15-year moving average also used in the X-3.

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Subscription price per year $15 domestic, and $18.75 foreign. Single copy $2.25. Send correspondence on circulation and subscription matters (including address changes) to the Superintendent of Documents.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Controlled circulation postage paid at Riverdale, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) rose 1.0 percent before seasonal adjustment in May to 244.9 (1967=100). The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also increased 1.0 percent before seasonal adjustment in May to 245.1 (1967=100). Both the CPI-U were 14.4 percent higher than in May 1979.

CPI for All Urban Consumers (CPI-U)——seasonally adjusted changes

On a seasonally adjusted basis, the CPI-U rose 0.9 percent in May, the same as in April and considerably less than increases of 1.4 percent in each of the first 3 months of the year. The housing component continued to advance sharply and accounted for over three-fourths of the increase in May. As in April, however, most other major categories of consumer spending advanced at more moderate rates.

The 1.5 percent increase in the housing index continued the sharp upward trend evident since early 1979. In May, home financing costs rose 3.0 percent. House prices rose 1.3 percent. Although FHA and VA mortgage interest rates dropped substantially, conventional rates continued to increase in the index, partly because of the lag between the announcement of rate changes and actual mortgage transactions. Conventional mortgage interest rates are represented in the CPI by actual mortgage loan transactions and not by current commitment rates. Natural gas and electricity charges increased 4.8 and 2.5 percent, respectively, resulting in a sharp rise in the index for household fuels in May despite a decline in fuel oil prices. The index for rent increased 1.0 percent. (The 12-month percent changes for five experimental measures of housing costs can be found in table C and D.)

The index for food and beverages rose 0.3 percent in May, following an increase of 0.5 percent in April. Prices for grocery store foods increased 0.2 percent. Substantial declines in beef, pork, and egg prices were more than offset by increases in the indexes for fruits and vegetables, dairy products, cereal and bakery products, sugar and sweets, and other prepared foods. Prices of the other two components of the food and beverage index——restaurant meals and alcoholic beverages——rose 0.5 and 0.7 percent, respectively, in May.

The transportation index rose 0.3 percent in May, the smallest increase since April 1978. Gasoline prices, which were unchanged in April, declined 0.6 percent in May following seasonal adjustment. Used car prices declined 1.7 percent on a seasonally adjusted basis, the fourth consecutive decline. On the other hand, new car prices rose 1.0 percent, following a 1.4 percent increase in April as manufacturers' price increases were only partially offset by rebate programs. Automobile finance charges also continued to increase substantially——up 4.3 percent in May. The index for public transportation rose 1.5 percent, reflecting large increases in airline, taxi, and intercity train fares.

Table A. Percent changes in CPI for All Urban Consumers (CPI-U)

Expenditure category	Seasonally adjusted								Unadjusted
	From preceding month							Compound annual rate 3 months ended May 1980	12 months ended May 1980
	1979			1980					
	November	December	January	February	March	April	May		
All items	1.0	1.2	1.4	1.4	1.4	0.9	0.9	13.6	14.4
Food and beverages	.7	1.4	.1	0	1.0	.5	.3	7.6	7.0
Housing	1.3	1.4	1.4	1.4	1.6	1.3	1.5	19.7	17.7

Transportation	1.2	1.4	3.1	2.8	1.7	.6	.3	10.8	19.9
Medical care care	.9	1.1	1.3	1.5	.9	.7	.5	8.6	11.5
Entertainment	.5	.2	1.0	1.2	1.3	.8	.6	11.4	8.6
Other goods and services	.3	.7	1.1	1.0	.5	.6	.8	7.7	8.9

Table B. Percent changes in CPI for Urban Wage Earners and Clerical Workers (CPI-W)

Expenditure category	Seasonally adjusted								Unadjusted
	From preceding month							Compound annual rate 3 months ended May 1980	12 months ended May 1980
	1979		1980						
	November	December	January	February	March	April	May		
All items	1.0	1.2	1.4	1.4	1.4	1.0	0.9	13.6	14.4
Food and beverages	.6	1.4	.2	0	0.9	.7	.5	8.5	7.2
Housing	1.2	1.3	1.5	1.4	1.6	1.4	1.5	19.5	17.7
Apparel and upkeep	.1	.5	.8	.9	1.7	.3	.1	8.8	6.7
Transportation	1.3	1.5	3.1	2.8	1.7	.6	.2	10.8	19.8
Medical care	.8	1.1	1.3	1.5	.9	.8	.6	9.6	12.1
Entertainment	.5	–.1	.8	1.2	1.6	.8	.5	12.1	8.2
Other goods and services	.3	.6	1.4	.9	.4	.5	.8	6.9	8.7

The index for apparel and upkeep declined 0.2 percent in May, following seasonal adjustment. A decline in prices for women's and girls' clothing, reflecting early summer sales, was primarily responsible for the decline. Prices for men's and boys' apparel and footwear registered moderate increases while charges for apparel services—up 1.0 percent in May—continued to increase substantially.

The index for medical care rose 0.5 percent in May, the smallest increase in the last 12 months. The index for medical care services also rose 0.5 percent as charges for professional and hospital services both increased less than in recent months. The index for medical care commodities rose 0.9 percent in May, about the same as earlier this year.

The index for entertainment rose 0.6 percent in May, the smallest increase this year. The other goods and services component increased 0.8 percent, more than in March or April. Increases in prices for tobacco products, toilet goods and personal care appliances, and bank service charges were primarily responsible for the rise.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI-W rose 0.9 percent in May. This compares with a 1.0 percent increase in April and increases of 1.4 percent in each of the first 3 months of the year. The housing component continued to advance sharply and accounted for about three-fourths of the CPI increase in May. As in April, however, most other major categories of consumer spending advanced at more moderate rates.

The 1.5 percent increase in the housing index continued the sharp upward trend evident since early 1979. In May, home financing costs rose 3.1 percent, reflecting an increase of 1.7 percent in mortgage interest rates and 1.3 percent in house prices. The index for rent increased 1.0 percent. Prices for household fuels rose sharply in May as charges for natural gas and electricity increased 4.6 and 2.5 percent, respectively. Fuel oil prices, however, were unchanged in May.

The index for food and beverages rose 0.5 percent in May, following an increase of 0.7 percent in April. Prices for grocery store foods increased 0.3 percent. Substantial declines in beef, pork, and egg prices were more than offset by increases in the indexes for fruits and vegetables, dairy products, cereal and bakery products, sugar and sweets, and other prepared foods.

The transportation index rose 0.2 percent in May, the smallest increase since April 1978. Gasoline prices declined for the second consecutive month—down 0.6 percent in May—following seasonal adjustment. Used car prices declined 1.7 percent on a seasonally adjusted basis, the fourth consecutive decline. On the other hand, new car prices rose 1.1 percent, following a 1.6 percent increase in April. The index for public transportation rose 1.4 percent.

The index for apparel and upkeep rose 0.1 percent in May. Prices for women's and girls' clothing, reflecting early summer sales, declined 1.0 percent while prices for both men's and boys' apparel and footwear increased 0.5 percent.

In May, the index for medical care rose 0.6 percent and the index for entertainment rose 0.5 percent, the smallest this year. On the other hand, the other goods and services component increased 0.8 percent, more than in March or April.

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas priced on pricing schedule 2 (See table 13) will appear next month.

[2] Indexes on an October 1967 = 100 base unless otherwise indicated.

[3] Indexes on a November 1977 = 100 base unless otherwise indicated.

[4] Index on a June 1978 = 100 base in Miami, Fla.; formerly on a November 1977 = 100 base.

[5] Indexes on a June 1978 = 100 base in Cincinnati, Ohio-Ky.-Ind. and Miami, Fla.; formerly on the bases listed in footnote 6. Index on a January 1978 = 100 base in Denver-Boulder, Col.

[6] Indexes are on the bases listed :

Anchorage, Alaska	January 1978 = 100.
Baltimore, Md.	March 1978 = 100.
Boston, Mass.	January 1978 = 100.
Cincinnati, Ohio-Ky.-Ind.	March 1978 = 100.
Denver-Boulder, Colo.	January 1978 = 100.
Miami, Fla.	November 1977 = 100.
Milwaukee, Wis.	November 1977 = 100.
Northeastern Pennsylvania	November 1977 = 100.
Portland, Oreg.-Wash.	January 1978 = 100.
St. Louis, Mo.-Ill.	March 1978 = 100.
San Diego, Calif.	November 1977 = 100.
Seattle-Everett, Wash.	November 1977 = 100.
Washington, D.C.-Md.-Va.	November 1977 = 100.

[7] Indexes on a June 1978 = 100 base; formerly on the bases listed in footnote 6.

[8] The 1957-59 = 100 base is not available for San Diego, Calif.; index is on a February 1965 = 100 base.

[9] Index is on an April 1967 = 100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[10] Index on a June 1978 = 100 base in San Diego, Calif.; formerly on a November 1977 = 100 base.

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[9] Index is on an April 1967 = 100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[10] Index on a June 1978 = 100 base in San Diego, Calif.; formerly on a November 1977 = 100 base.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from over 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, nospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 22 percent, for example, is shown as 122.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $12.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), and *Revisions in the Medical Care Service component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change

CPI	236.4
Less previous index	233.2
Equals index point change:	3.2

Percent Change

Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1976 through 1980 will be replaced at the end of 1980. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components.

Explanation of Homeownership Measures

Official CPI-U includes five components.(1) The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home, and the total amount of interest expected to be paid over half the stated life of the mortgage. (2) Current monthly prices are used for each of these components.

Experimental Measure X-1: (1) The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. (2) Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: (1) The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owned and the equity component is the amount owed, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. (2) Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: (1) The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowners population. (2) The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3, uses past and current mortgage interest costs in a 15-year weighted moving average, which reflects the base period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) The prices used for each of these items are current ones.

Experimental Measure X-5: (1) The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) Current prices are used in X-5 except for mortgage interest which uses the 15-year moving average also used in the X-3.

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Subscription price per year $15 domestic, and $18.75 foreign. Single copy $2.25. Send correspondence on circulation and subscription matters (including address changes) to the Superintendent of Documents.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Controlled circulation postage paid at Riverdale, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) rose 1.1 percent before seasonal adjustment in June to 247.6 (1967 = 100). The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-U) also increased 1.1 percent before seasonal adjustment in June to 247.8 (1967 = 100). The CPI-U was 14.3 percent higher and the CPI-W was 14.2 percent higher than in June 1979.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers rose 1.0 percent in June, following increases of 0.9 percent in each of the 2 preceding months. The housing component continued to advance sharply, rising 1.8 percent and accounting for over four-fifths of the June increase. On the other hand, the transportation index declined slightly in June, following 2 months of comparatively moderate increases. Food prices increased at a slightly faster rate in June. Other major categories of consumer spending, however, continued to show the more moderate rates of change evident since April.

During the 3 months ended in June, the CPI-U rose at a seasonally adjusted annual rate of 11.6 percent. This compares with an increase of 18.1 percent during the first quarter of 1980 and increases of about 13 percent during each of the 4 quarters of 1979. Indexes for housing and food advanced at about the same rate in the second quarter as in the first. The other major expenditure groups showed substantially smaller price increases in the second quarter.

Rising shelter costs accounted for most of the 1.8-percent increase in the housing component in June. Home financing costs rose 4.6 percent, reflecting an increase of 3.8 percent in mortgage interest rates and 1.2 percent in house prices. Conventional mortgage interest rates continued to increase in the June index, partly because of the lag between the publicized rate changes and actual mortgage transaction. These rates are represented in the CPI by actual mortgage loan transactions and not by current commitment rates. Property insurance costs rose 1.7 percent in June, following a 1.6 percent increase in May. The index for rent increased 1.2 percent. Prices for fuels and other utilities continued to increase as charges for electricity, telephone services, and water and sewerage maintenance rose sharply in June. Fuel oil prices and charges for natural gas, however, registered moderate increases. (The 12-month percent changes for 5 experimental measures of housing costs can be found in tables C and D.)

The index for food and beverages rose 0.5 percent in June, continuing the moderate trend evident throughout most of 1980. Prices for grocery store foods increased

Table A. Percent changes in CPI for All Urban Consumers (CPI-U)

Apparel and upkeep	.5	.8	.9	1.7	.2	.1	–.3	..2	6.5
Transportation	1.5	3.1	2.8	1.7	.6	.2	–.3	2.5	17.3
Medical care	1.1	1.3	1.5	.9	.8	.6	.4	7.7	11.6
Entertainment	–.1	.8	1.2	1.6	.8	.5	.7	8.5	8.8
Other goods and services	.6	1.4	.9	.4	.5	.8	.8	8.7	9.2

0.4 percent in June compared with 0.2 percent in May. Prices for sugar and sweets, soft drinks, and other prepared food rose substantially. Most other grocery store foods also rose but by less than in May. The index for meats, poultry, fish, and eggs declined in June, but not as much as in the 2 previous months. Prices of the other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.9 and 0.7 percent, respectively.

The transportation index declined 0.2 percent in June, following increases of 0.3 percent in May and 0.6 percent in April. Gasoline prices declined 1.0 percent, following seasonal adjustment, and were largely responsible for the decrease. Gasoline prices, which rose at a seasonally adjusted annual rate of 105.7 percent during the first quarter, declined at a 6.2 percent rate during the second quarter. In June, used car prices continued to decline while new car prices increased slightly. Automobile finance charges, which rose at a monthly rate of 4.0 percent during the first 5 months of 1980, declined 0.8 percent in June. The index for public transportation rose 1.1. percent, reflecting large increases in airline and intercity train fares.

The index for apparel and upkeep was unchanged in June. Price declines in men's and boys' and women's and girls' spring and summer clothing were offset by price increases in infants' and toddlers' clothing, other apparel commodities, and higher charges for apparel services.

The medical care index rose 0.5 percent in June, the same as in May. Charges for medical care services rose 0.4 percent. The physicians' fees and hospital room components rose 0.6 and 0.8 percent, respectively. The index for medical care commodities rose 0.9 percent in June, about the same as in recent months.

The indexes for entertainment and other goods and services rose 0.6 and 0.8 percent, respectively, the same as in May.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.9 percent in June, about the same as in April and May and substantially less than increases of 1.4 percent in each of the first 3 months of 1980. The housing component continued to advance sharply and accounted for over four-fifths of the June increase. On the other hand, the transportation and apparel indexes declined slightly in June, following 2 months of comparatively moderate increases. Other major categories of consumer spending continued to show the more moderate trend whic began in April.

Rising shelter costs accounted for most of the increase in the housing component in June. Home financing costs rose 4.7 percent, reflecting an increase of 3.9 percent in mortgage interest rates and 1.3 percent in house prices. Property insurance costs rose 1.6 percent in June, following a 1.7 percent increase in May. The index for rent increased 1.1 percent. Prices for fuels and other utilities continued to increase as charges for electricity, telephone services, and water and sewerage maintenance rose sharply in June.

The index for food and beverages rose 0.5 percent in June, continuing the moderate trend evident throughout most of 1980. Prices for grocery store foods increased 0.3 percent. Prices for sugar and sweets rose 4.5 percent in June. Most other grocery store foods, also rose, but by less than in May. The index for meats, poultry, fish, and eggs declined in June but not as much as in the two previous months.

The transportation index declined 0.3 percent in June, following increases of 0.2 percent in May and 0.6 percent in April. A 1.1 percent decline in gasoline prices, following seasonal adjustment, was largely responsible for the decrease. In June, used car prices continued to decline and new car prices rose 0.2 percent. Automobile finance charges, which rose at a monthly rate of 4.0 percent during the first 5 months of 1980, declined 0.2 percent in June. The index for public transportation rose 0.9 percent.

The index for apparel and upkeep declined 0.3 percent in June. Price declines in men's and boys' and women's and girls' spring and summer clothing were partially offset by price increases in infants' and toddlers' clothing and other apparel commodities.

The medical care index rose 0.4 percent in June, compared with 0.6 percent in May. Charges for physicians' fees and hospital rooms rose 0.6 and 0.8 percent, respectively.

The entertainment index rose 0.7 percent in June, following an increase of 0.5 percent in May, primarily due to increases in prices for movie admissions. The index for other goods and services rose 0.8 percent, the same as in May.

Group and item	Other index base	Unadjusted indexes		Unadjusted percent change to June 1980 from—		Seasonally adjusted percent change from—		
		May 1980	June 1980	June 1979	May 1980	Mar. to Apr.	Apr. to May	May to June
Dairy products		226.9	227.8	10.6	0.4	1.0	1.8	0.5
Fresh milk and cream [1]	12/77	127.2	127.4	9.8	.2	.6	1.8	.2
Fresh whole milk		208.4	208.7	10.0	.1	1.0	2.1	.0
Other fresh milk and cream [1]	12/77	126.8	127.2	9.7	.3	.8	2.2	.3
Processed dairy products [1]	12/77	129.9	130.7	11.7	.6	1.4	1.5	.6
Butter [1]		225.3	227.2	12.5	.8	.8	1.2	.8
Cheese [1]	12/77	128.5	129.0	10.9	.4	1.0	1.3	.4
Ice cream and related products [1]	12/77	132.9	133.8	13.6	.7	2.5	1.9	.7
Other dairy products [1]	12/77	125.7	127.4	11.2	1.4	1.4	1.7	1.4
Fruits and vegetables		245.5	250.2	8.1	1.9	3.6	2.6	.6
Fresh fruits and vegetables		254.4	261.4	8.7	2.8	6.3	4.4	-.2
Fresh fruits		263.8	274.9	5.3	4.2	1.3	1.0	-.3
Apples		277.3	297.4	27.3	7.2	2.5	.1	.9
Bananas		244.5	237.7	7.2	-2.8	-2.8	1.7	-2.1
Oranges		237.6	251.0	-14.3	5.6	-1.0	.0	2.0
Other fresh fruits [1]	12/77	140.9	146.5	4.1	4.0	6.9	3.8	4.0
Fresh vegetables		246.0	249.4	12.4	1.4	10.6	6.2	.3
Potatoes		205.6	244.4	9.0	18.9	-2.2	-3.6	4.5
Lettuce [1]		288.6	241.7	29.9	-16.3	38.3	2.4	-16.3
Tomatoes [1]		228.4	228.6	2.5	.1	.3	15.5	.1
Other fresh vegetables [1]	12/77	139.7	143.4	11.4	2.6	10.0	3.3	2.6
Processed fruits and vegetables		237.6	239.7	7.2	.9	.5	1.2	1.1
Processed fruits	12/77	125.7	126.7	8.3	.8	.8	1.2	1.1
Frozen fruit and fruit juices [1]	12/77	117.5	118.9	3.9	1.2	1.6	-.8	1.2
Fruit juices other than frozen [1]	12/77	129.8	130.4	13.3	.5	.8	1.1	.5
Canned and dried fruits [1]	12/77	127.8	128.9	6.4	.9	.4	1.1	.9
Processed vegetables	12/77	113.9	115.0	6.4	1.0	.4	1.4	1.5
Frozen vegetables [1]	12/77	114.6	116.3	8.0	1.5	1.0	1.4	1.5
Cut corn and canned beans except lima [1]	12/77	114.2	115.2	2.9	.9	-1.0	-.1	.9
Other canned and dried vegetables [1]	12/77	113.3	114.2	7.4	.8	.4	.5	.8
Other foods at home		298.0	301.4	13.2	1.1	.8	1.0	1.1
Sugar and sweets [1]		328.0	342.9	24.0	4.5	2.1	2.2	4.5
Candy and chewing gum [1]	12/77	129.0	130.8	11.8	1.4	2.1	2.0	1.4
Sugar and artificial sweeteners [1]	12/77	163.3	180.7	56.7	10.7	3.1	3.0	10.7
Other sweets [1]	12/77	122.2	124.6	11.3	2.0	.6	1.8	2.0
Fats and oils		240.1	240.5	6.1	.2	-.2	.3	-.5
Margarine		248.4	249.4	4.6	.4	-.8	-.5	-.3
Nondairy substitutes and peanut butter [1]	12/77	121.6	123.5	9.8	1.6	1.3	1.3	1.6
Other fats, oils, and salad dressings [1]	12/77	125.5	124.9	5.7	-.5	.8	.9	-.5
Nonalcoholic beverages		392.3	395.1	13.4	.7	.3	.3	.6
Cola drinks, excluding diet cola [1]		263.2	267.1	13.8	1.5	1.8	1.2	1.5
Carbonated drinks, including diet cola [1]	12/77	124.8	125.2	11.3	.3	1.9	1.1	.3
Roasted coffee [1]		430.0	429.2	23.6	-.2	-.4	-.1	-.2
Freeze dried and instant coffee		380.4	378.7	15.1	-.4	.0	-.3	-.4
Other noncarbonated drinks [1]	12/77	120.0	120.8	7.6	.7	1.3	.3	.7
Other prepared foods		229.6	230.8	11.0	.5	1.2	1.5	.8
Canned and packaged soup [1]	12/77	122.5	123.7	9.9	1.0	2.6	1.6	1.0
Frozen prepared foods [1]	12/77	131.0	130.8	10.3	-.2	1.3	1.7	-.2
Snacks [1]	12/77	127.3	127.9	12.5	.5	.6	1.0	.5
Seasonings, olives, pickles, and relish [1]	12/77	125.5	127.3	11.7	1.4	.4	.8	1.4
Other condiments [1]	12/77	129.2	129.9	13.1	.5	1.2	.9	.5
Miscellaneous prepared foods [1]	12/77	127.0	128.3	11.8	1.0	1.2	2.7	1.0
Other canned and packaged prepared foods [1]	12/77	124.3	124.1	7.6	-.2	1.1	.8	-.2

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas on pricing schedule 1 (See table 13) will appear next month.

[2] For the following areas the 1957-59=100 base is not available; indexes are on the bases listed:

Buffalo, N. Y.	November 1963=100.
Dallas-Fort Worth, Tex.	November 1963=100.
Honolulu, Hawaii	December 1963=100.

[3] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 4, except in Buffalo, N.Y. where 1967=100.

[4] Indexes are on the bases listed:

Atlanta, Ga.	December 1977=100.
Buffalo, N. Y.	February 1978=100.
Cleveland, Ohio	February 1978=100.
Dallas-Fort Worth, Tex.	February 1978=100.
Honolulu, Hawaii	December 1977=100.
Houston, Tex.	April 1978=100.
Kansas City, Mo.-Kans.	December 1977=100.
Minneapolis-St. Paul, Minn.-Wis.	April 1978=100.
Pittsburgh, Pa.	April 1978=100.
San Francisco-Oakland, Calif.	December 1977=100.

[5] Indexes on a June 1978=100 base; formerly on the bases listed in Footnote 4.

[6] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 4, except in Minneapolis-St. Paul, Minn.-Wis. where 1967=100.

[NA] Data not adequate for publication.

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas on pricing schedule 1 (See table 18) will appear next month.

[2] For the following areas the 1957-59 = 100 base is not available; indexes are on the bases listed:

Buffalo, N. Y. .... November 1963 = 100.
Dallas-Fort Worth, Tex. .... November 1963 = 100.
Honolulu, Hawaii .... December 1963 = 100.

[3] Indexes on a June 1978 = 100 base; formerly on the bases listed in footnote 4, except in Buffalo, N.Y. where 1967 = 100.

[4] Indexes are on the bases listed:

Atlanta, Ga. .... December 1977 = 100.
Buffalo, N. Y. .... February 1978 = 100.
Cleveland, Ohio .... February 1978 = 100.
Dallas-Fort Worth, Tex. .... February 1978 = 100.
Honolulu, Hawaii .... December 1977 = 100.
Houston, Tex. .... April 1978 = 100.
Kansas City, Mo.-Kans. .... December 1977 = 100.
Minneapolis-St. Paul, Minn.-Wis. .. April 1978 = 100.
Pittsburgh, Pa. .... April 1978 = 100.
San Francisco-Oakland, Calif. ...... December 1977 = 100.

[5] Indexes on a June 1978 = 100 base; formerly on the bases listed in Footnote 4.

[6] Indexes on a June 1978 = 100 base; formerly on the bases listed in footnote 4, except in Minneapolis-St. Paul, Minn.-Wis. where 1967 = 100.

[NA] Data not adequate for publication.

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[NA] Data not adequate for publication.

Nondurables	133.3	13.8	1.1	134.8	13.5	1.0	134.7	14.1	1.1	135.1	12.8	.7
Services less rent	130.0	15.2	2.6	144.0	21.1	4.7	140.7	18.5	3.5	146.5	25.5	4.1
Services less medical care	128.2	14.5	2.6	142.4	20.4	4.6	139.5	18.1	3.6	144.7	24.5	4.3
Energy [2]	171.5	34.9	1.2	164.5	31.2	2.2	164.9	33.5	2.1	178.5	39.0	4.9
All items less energy	124.3	10.4	2.1	130.8	12.4	2.6	129.3	11.5	2.0	131.9	14.0	1.8
All items less food and energy	123.1	11.1	2.1	131.2	13.8	2.9	129.4	12.6	2.1	132.3	15.5	1.8
Commodities less food and energy	118.8	8.3	1.7	122.7	8.3	1.8	121.4	7.7	1.3	122.9	8.8	.7
Energy commodities	199.2	43.2	.5	196.1	40.7	.5	194.5	44.8	.8	194.7	36.6	-.5
Services less energy	127.3	13.9	2.4	141.5	20.3	4.1	138.4	18.0	3.1	141.6	22.1	2.9

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

NA Data not adequate for publication.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from over 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 22 percent, for example, is shown as 122.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $12.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), and *Revisions in the Medical Care Service component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change

CPI	236.4
Less previous index	233.2
Equals index point change:	3.2

Percent Change

Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1976 through 1980 will be replaced at the end of 1980. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components.

Explanation of Homeownership Measures

Official CPI-U includes five components.(1) The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home, and the total amount of interest expected to be paid over half the stated life of the mortgage. (2) Current monthly prices are used for each of these components.

Experimental Measure X-1: (1) The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. (2) Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: (1) The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owned and the equity component is the amount owed, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. (2) Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: (1) The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowners population. (2) The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3, uses past and current mortgage interest costs in a 15-year weighted moving average, which reflects the base period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) The prices used for each of these items are current ones.

Experimental Measure X-5: (1) The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) Current prices are used in X-5 except for mortgage interest which uses the 15-year moving average also used in the X-3.

L 2.38/3:

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.1 percent before seasonal adjustment in July to 247.8 (1967 = 100). The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also increased 0.1 percent before seasonal adjustment in July to 248.0 (1967 = 100). The CPI-U was 13.2 percent higher and the CPI-W was 13.0 percent higher than in July 1979.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI-U was unchanged from June to July. This compares with increases of 0.9 percent or more in each of the preceding 18 months and marked the first time since March 1967 that the CPI did not register an increase. The index for housing declined 0.7 percent, as a result of a 5.7 percent decline in mortgage interest rates. This decrease offset the acceleration in food and beverage prices, as well as the comparatively moderate increases in most other major categories of consumer spending.

The decline in the housing component in July followed a 15-month period of increases of 1.0 percent or more and was the first decrease since March 1973. Home financing costs declined 5.6 percent, reflecting the 5.7 percent decrease in mortgage interest rates and an increase of 0.5 percent in house prices. The index for rent rose 0.5 percent in July, following increases of 1.0 percent or more in each of the previous 2 months. Prices for household fuels continued to increase but not as much as in the 2 previous months. Charges for natural gas and electricity rose 1.4 and 1.0 percent, respectively, while fuel oil prices continued the moderate trend evident since April. The index for household furnishings and operations rose 0.6 percent in July, the same as in May and June.

Prices for grocery store foods rose 1.2 percent in July, after increasing only 1.5 percent during the first 6 months of the year. Prices for beef, pork, and poultry rose sharply, following 3 months of declines. The indexes for fruits and vegetables and dairy products also registered substantial increases in July. Prices for sugar and sweets continued the sharp upward trend which began in January. Prices of the other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.5 percent in July, less than in recent months.

The transportation component rose 0.4 percent in July, following a decline of 0.2 percent in June. New and used car prices rose 0.9 and 0.7 percent, respectively, and were primarily responsible for the July increase. Gasoline prices declined, following seasonal adjustment, for the third consecutive month, but not as much as in May or June. Prices for tires and other petroleum products—motor oil and coolant—rose substantially in July. Automobile finance charges, which had advanced

Entertainment	.8	1.2	1.6	.8	.5	.7	.4	6.9	8.4
Other goods and services	1.4	.9	.4	.5	.8	.8	.5	8.5	9.1

sharply earlier this year, declined 2.6 percent in July, following a drop of 0.8 percent in June. The index for public transportation rose 3.4 percent, reflecting a large increase in intracity mass transit fares.

The medical care index rose 0.7 percent in July, following increases of 0.5 percent in both May and June. Charges for hospital and other medical services rose 1.5 percent. Physicians' fees rose 0.6 percent in July, the same as in June. The index for medical care commodities rose 0.8 percent, about the same as the monthly increase during the first 6 months of 1980.

The index for apparel and upkeep rose 0.4 percent in July. Seasonal sales were prevalent, but most clothing items registered small increases, following seasonal adjustment. Charges for apparel services rose 0.3 percent in July, following a 0.6 percent increase in June and substantially larger increases earlier this year. The index for entertainment rose 0.8 percent and the index for other goods and services increased 0.5 percent in July, following increases in June of 0.6 and 0.8 percent, respectively.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI-W was unchanged from June to July. This compares with increases of 0.9 percent or more in each of the preceding 18 months. The housing index declined 0.7 percent as mortgage interest rates declined 5.6 percent. This decrease offset both the advance in the food and beverage index and the comparatively moderate increases in most other categories of consumer spending.

The decline in the housing components in July followed a 17-month period of increases of 1.0 percent or more and was the first decrease since March 1973. Home financing costs declined 5.6 percent, reflecting the 5.6 percent decrease in mortgage interest rates and an increase of 0.5 percent in house prices. The index for rent rose 0.5 percent in July, following increases of 1.0 percent or more in each of the previous 2 months. Prices for household fuels continued to increase but not as much as in the 2 previous months. Charges for natural gas and electricity rose 1.0 and 1.2 percent, respectively, while fuel oil prices continued the moderate upward trend evident since April.

Prices for grocery store foods rose 1.1 percent in July, after increasing only 1.6 percent during the first 6 months of the year. Prices for beef, pork, and poultry rose sharply, following 3 months of declines. The indexes for fruits and vegetables and dairy products also registered substantial increases in July. Prices for sugar and sweets continued the sharp upward trend which began in January. Prices of the other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.5 and 0.6 percent, respectively, in July.

The transportation component rose 0.4 percent in July, following a decline of 0.3 percent in June. New and used car prices rose 0.8 and 0.7 percent, respectively, and were primarily responsible for the July increase. Gasoline prices declined for the fourth consecutive month, following seasonal adjustment, but not as much as in May or June. Prices for tires and other petroleum products—motor oil and coolant—rose substantially in July. Automobile finance charges, which had advanced sharply earlier this year, declined 2.9 percent in July, following a drop of 0.2 percent in June. The index for public transportation rose 4.6 percent, reflecting a large increase in intracity mass transit fares.

The medical care index rose 0.8 percent in July, compared with an increase of 0.4 percent in June. Charges for hospital and other medical services rose 1.8 percent as many hospitals changed their price structure in July.

The index for apparel and upkeep rose 0.5 percent in July. Seasonal sales were prevalent but most clothing items registered small increases, following seasonal adjustment. Charges for apparel services rose 0.3 percent in July, about the same as in June and substantially less than increases earlier this year. The index for entertainment rose 0.4 percent and the index for other goods and services increased 0.5 percent in July, following increases in June of 0.7 and 0.8 percent, respectively.

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

---

[1] Areas priced on pricing schedule 2 (See table 13) will appear next month.

[2] Indexes on an October 1967 = 100 base unless otherwise indicated.

[3] Indexes on a November 1977 = 100 base unless otherwise indicated.

[4] The 1957-59 = 100 base is not available for Anchorage, Alaska and Denver-Boulder, Colo.; index for Anchorage, Alaska is on a May-October 1960 = 100 base; index for Denver-Boulder, Colo.is on a January 1964 = 100 base.

[5] Index on a June 1978 = 100 base in Miami, Fla.; formerly on a November 1977 = 100 base.

[6] Indexes on a June 1978 = 100 base in Cincinnati, Ohio-Ky.-Ind. and Miami, Fla.; formerly on the bases listed in footnote 6. Index on a January 1978 = 100 base in Denver-Boulder, Col.

[7] Indexes are on the bases listed :

Anchorage, Alaska	January 1978 = 100.
Baltimore, Md	March 1978 = 100.
Boston, Mass	January 1978 = 100.
Cincinnati, Ohio-Ky.-Ind	March 1978 = 100.
Denver-Boulder, Colo	January 1978 = 100.
Miami, Fla	November 1977 = 100.
Milwaukee, Wis	November 1977 = 100.
Northeastern Pennsylvania	November 1977 = 100.
Portland, Oreg.-Wash	January 1978 = 100.
St. Louis, Mo.-Ill	March 1978 = 100.
San Diego, Calif	November 1977 = 100.
Seattle-Everett, Wash	November 1977 = 100.
Washington, D.C.-Md.-Va	November 1977 = 100.

[8] Indexes on a June 1978 = 100 base; formerly on the bases listed in footnote 6.

[9] The 1957-59 = 100 base is not available for San Diego, Calif.; index is on a February 1965 = 100 base.

[10] Index is on an April 1967 = 100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[11] Index on a June 1978 = 100 base in San Diego, Calif.; formerly on a November 1977 = 100 base.

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

South/D	2.1	2.0	3.1	.8	4.1	.7
West/D	1.4	.9	2.2	.5	3.1	.3

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from over 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 22 percent, for example, is shown as 122.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $12.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), and *Revisions in the Medical Care Service component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change

CPI	236.4
Less previous index	233.2
Equals index point change:	3.2

Percent Change

Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1976 through 1980 will be replaced at the end of 1980. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components.

Explanation of Homeownership Measures

Official CPI-U includes five components.(1) The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home, and the total amount of interest expected to be paid over half the stated life of the mortgage. (2) Current monthly prices are used for each of these components.

Experimental Measure X-1: (1) The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. (2) Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: (1) The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owned and the equity component is the amount owed, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. (2) Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: (1) The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowners population. (2) The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3, uses past and current mortgage interest costs in a 15-year weighted moving average, which reflects the base period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) The prices used for each of these items are current ones.

Experimental Measure X-5: (1) The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, propperty insurance, maintenance, and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) Current prices are used in X-5 except for mortgage interest which uses the 15-year moving average also used in the X-3.

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Subscription price per year $15 domestic, and $18.75 foreign. Single copy $2.25. Send correspondence on circulation and subscription matters (including address changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Fort Royal Road, Springfield, Virginia 22161. Subscription rates: $95 in contiguous U.S. and Hawaii; $110 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Controlled circulation postage paid at Riverdale, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.6 percent before seasonal adjustment in August to 249.4 (1967=100). The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also increased 0.6 percent before seasonal adjustment in August to 249.6 (1967=100). The CPI-U was 12.8 percent higher and the CPI-W was 12.7 percent higher than in August 1979.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI-U rose 0.7 percent in August. This increase followed no change in July and an average monthly increase of 0.9 percent during the second quarter of this year. About one-half of the August increase was due to a sharp acceleration in the food and beverage index, which rose 1.7 percent. The housing component showed little change in August (0.1 percent increase), following a decline of 0.7 percent in July, as higher house prices and other housing costs offset a 4.3 percent decline in mortgage interest rates. The transportation component also accelerated in August, primarily reflecting price increases for new and used cars. Other major components of consumer expenditures continued to advance at about the same rate as in July.

Prices for grocery store foods rose 2.3 percent in August, following a 1.2 percent increase in July and much smaller increases earlier this year. The index for meats, poultry, fish, and eggs rose 4.1 percent and accounted for about one-half of the increase. Beef, pork, and poultry prices all advanced sharply for the second consecutive month. Egg prices rose 6.6 percent, following a 3.9 percent decline in July. The indexes for fresh fruits and vegetables, non-alcoholic beverages, fats and oils, and other prepared foods also registered substantial increases in August. Prices of the other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.6 and 1.0 percent, respectively.

The housing index increased 0.1 percent in August, following a 0.7 percent decline in July and substantially larger increases earlier this year. After decreasing 5.6 percent in July, home financing costs declined 2.8 percent in August, reflecting a 4.3 percent drop in mortgage interest rates and a rise of 1.7 percent in house prices. The index for rent rose 0.6 percent, about the same as in July. Prices for household fuels rose 0.5 percent, the smallest increase this year. Fuel oil prices continued the moderate rate of increase evident since April and charges for natural gas and electricity advanced less than in recent months. The index for household furnishings and operations rose 0.5 percent in August, about the same as in recent months.

The transportation component increased 0.9 percent in August, the largest monthly advance since March. New and used car prices rose 1.7 and 2.3 percent, respectively, and were primarily responsible for the increase. The index for public transportation rose 4.4 percent, reflecting large increases in airline, intracity mass transit, intercity bus, and taxi fares. Gasoline prices declined for the fourth consecutive month. Automobile finance charges, which had advanced sharply earlier this year, declined for the third consecutive month.

Table A. Percent changes in CPI for All Urban Consumers (CPI-U)

Expenditure category	Seasonally adjusted								Unadjusted
	From preceding month							Compound annual rate 3 months ended August 1980	12 months ended August 1980
	1980								
	February	March	April	May	June	July	August		
All items	1.4	1.4	0.9	0.9	1.0	0	0.7	6.9	12.8
Food and beverages	0	1.0	.5	.3	.5	.9	1.7	13.7	9.5
Housing	1.4	1.6	1.3	1.5	1.8	-.7	.1	5.0	14.8
Apparel and upkeep	.6	2.0	.3	-.2	0	.4	.6	4.1	7.4
Transportation	2.8	1.7	.6	.3	-.2	.4	.9	4.1	15.1
Medical care	1.5	.9	.7	.5	.5	.7	.7	8.0	11.0
Entertainment	1.2	1.3	.8	.6	.6	.8	.8	9.1	9.4
Other goods and services	1.0	.5	.6	.8	.8	.5	.6	7.6	8.9

Table B. Percent changes in CPI for Urban Wage Earners and Clerical Workers (CPI-W)

Expenditure category	Seasonally adjusted								Unadjusted
	From preceding month							Compound annual rate 3 months ended August 1980	12 months ended August 1980
	1980								
	February	March	April	May	June	July	August		
All items	1.4	1.4	1.0	0.9	0.9	0	0.7	6.7	12.7
Food and beverages	0	.9	.7	.5	.5	.9	1.7	13.1	9.6
Housing	1.4	1.6	1.4	1.5	1.9	-.7	.2	5.5	14.8
Apparel and upkeep	.9	1.7	.3	.1	-.3	.5	.7	3.7	7.0
Transportation	2.8	1.7	.6	.2	-.3	.4	.9	3.9	14.9
Medical care	1.5	.9	.8	.6	.4	.8	.8	8.3	11.3
Entertainment	1.2	1.6	.8	.5	.7	.4	.7	7.7	8.8
Other goods and services	.9	.4	.5	.8	.8	.5	.6	7.8	8.5

The index for apparel and upkeep rose 0.6 percent in August, compared with a 0.4 percent increase in July The introduction of fall and winter clothing was largely responsible for the increase. Prices for other apparel commodities rose sharply, primarily due to increases in prices for jewelry. The index for apparel services rose moderately for the third consecutive month, following substantial increases earlier this year.

The medical care index increased 0.7 percent in August, the same as in July. Charges for hospital and other medical care services rose 1.5 percent, while physicians' fees advanced 0.5 percent. The index for medical care commodities rose 0.9 percent, about the same as in recent months.

The index for entertainment rose 0.8 percent and the index for other goods and services increases 0.6 percent, about the same as in July.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI-W rose 0.7 percent in August, following no change in July and an average monthly increase of 0.9 percent during the second quarter this year. Almost one-half of the August increase was due to a sharp acceleration in the food and beverage index, which rose 1.7 percent. The housing component rose 0.2 percent in August, following a decline of 0.7 percent in July, as increases in house prices and other housing costs offset a 4.3 percent decline in mortgage interest rates. The transportation component also accelerated in August, primarily reflecting price increases for new and used cars. Most other major components of consumer expenditures advanced slightly more in August than in July.

Prices for grocery store foods rose 2.2 percent in August, following a 1.1 percent increase in July and much smaller increases earlier this year. The index for meats, poultry, fish, and eggs rose 3.8 percent and accounted for about one-half of the increase. Beef, pork, and poultry prices all advanced sharply for the second consecutive month. Egg prices rose 6.3 percent, following a 4.2 percent decline in July. The indexes for fresh fruits and vegetables, non-alcoholic beverages, fats and oils, and other prepared foods at home also registered substantial increases in August.

The housing index increased 0.2 percent in August, following a 0.7 percent decline in July and increases of 1.0 percent or more in each of the preceding 17 months. Following a 5.6 percent decrease in July, home financing costs declined 2.7 percent in August, reflecting a 4.3 percent drop in mortgage interest rates and an increase of 1.7 percent in house prices. The index for rent rose 0.6 percent, about the same as in July. Prices for household fuels rose 0.5 percent, the smallest increase this year.

The transportation component rose 0.9 percent in August, the largest increase since March. New and used car prices rose 1.7 and 2.3 percent, respectively, and were primarily responsible for the increase. The index for public transportation rose 4.5 percent. Gasoline prices declined for the fifth consecutive month. Automobile finance charges, which had advanced sharply earlier this year, declined for the third consecutive month.

The index for apparel and upkeep rose 0.7 percent in August, compared with an increase of 0.5 percent in July. The introduction of new fall and winter wear was largely responsible for the increase.

The medical care index rose 0.8 percent in August, the same as in July. Charges for hospital and other medical care services rose 1.7 percent, while physicians' fees rose 0.8 percent. The index for medical care commodities rose 0.8 percent.

The index for entertainment rose 0.7 percent, and the index for other goods and services increased 0.6 percent.

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas on pricing schedule 1 (See table 13) will appear next month.

[2] For the following areas the 1957-59=100 base is not available; indexes are on the bases listed:

Buffalo, N. Y..........November 1963=100.
Dallas-Fort Worth, Tex..........November 1963=100.
Honolulu, Hawaii..........December 1963=100.

[3] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 4, except in Buffalo, N.Y. where 1967=100.

[4] Indexes are on the bases listed:

Atlanta, Ga..........December 1977=100.
Buffalo, N. Y..........February 1978=100.
Cleveland, Ohio..........February 1978=100.
Dallas-Fort Worth, Tex..........February 1978=100.
Honolulu, Hawaii..........December 1977=100.
Houston, Tex..........April 1978=100.
Kansas City, Mo.-Kans..........December 1977=100.
Minneapolis-St. Paul, Minn.-Wis..April 1978=100.
Pittsburgh, Pa..........April 1978=100.
San Francisco-Oakland, Calif......December 1977=100.

[5] Indexes on a June 1978=100 base; formerly on the bases listed in Footnote 4.

[6] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 4, except in Minneapolis-St. Paul, Minn.-Wis. where 1967=100.

[NA] Data not adequate for publication.

West/D	2	12/77	-	134.1	-	135.1	13.1	.7	-	-	-	-

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

Northeast/D	1.0	-.1	4.2	-1.0	-1.6	.3
North Central/D	1.5	-.8	4.2	-.8	2.4	.5
South/D	2.3	-1.8	4.7	.5	4.5	1.6
West/D	1.8	.4	5.1	1.5	1.1	-.7

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas on pricing schedule 1 (See table 18) will appear next month.

[2] For the following areas the 1957-59=100 base is not available; indexes are on the bases listed:

Buffalo, N. Y. .... November 1963=100.
Dallas-Fort Worth, Tex. .... November 1963=100.
Honolulu, Hawaii .... December 1963=100.

[3] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 4, except in Buffalo, N.Y. where 1967=100.

[4] Indexes are on the bases listed:

Atlanta, Ga. .... December 1977=100.
Buffalo, N. Y. .... February 1978=100.
Cleveland, Ohio .... February 1978=100.
Dallas-Fort Worth, Tex. .... February 1978=100.
Honolulu, Hawaii .... December 1977=100.
Houston, Tex. .... April 1978=100.
Kansas City, Mo.-Kans. .... December 1977=100.
Minneapolis-St. Paul, Minn.-Wis. .... April 1978=100.
Pittsburgh, Pa. .... April 1978=100.
San Francisco-Oakland, Calif. .... December 1977=100.

[5] Indexes on a June 1978=100 base; formerly on the bases listed in Footnote 4.

[6] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 4, except in Minneapolis-St. Paul, Minn.-Wis. where 1967=100.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[NA] Data not adequate for publication.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1	-	More than 4,000,000.
A-2	-	1,250,000 to 4,000,000.
B	-	385,000 to 1,250,000.
C	-	75,000 to 385,000.
D	-	Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

NA Data not adequate for publication.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from over 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 22 percent, for example, is shown as 122.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $12.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), and *Revisions in the Medical Care Service component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change

CPI	236.4
Less previous index	233.2
Equals index point change:	3.2

Percent Change

Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1976 through 1980 will be replaced at the end of 1980. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components.

Explanation of Homeownership Measures

Official CPI-U includes five components.(1) The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home, and the total amount of interest expected to be paid over half the stated life of the mortgage. (2) Current monthly prices are used for each of these components.

Experimental Measure X-1: (1) The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. (2) Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: (1) The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owed and the equity component is the amount owned, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. (2) Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: (1) The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowners population. (2) The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3, uses past and current mortgage interest costs in a 15-year weighted moving average, which reflects the base period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) The prices used for each of these items are current ones.

Experimental Measure X-5: (1) The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) Current prices are used in X-5 except for mortgage interest which uses the 15-year moving average also used in the X-3.

24 Hour CPI Mailgram Service

Consumer Price Index data now are available by mailgram within 24 hours of the CPI release. The new service is being offered by the Bureau of Labor Statistics through the National Technical Information Service of the U.S. Department of Commerce.

The CPI MAILGRAM service provides unadjusted and seasonally adjusted U.S. City Average data both for the All Urban Consumers (CPI-U) and for the Urban Wage Earners and Clerical Workers (CPI-W) Indexes as shown on the CPI-U sample page below. The unadjusted data include the current month's index and the percent changes from 12 months ago and one month ago. The seasonally adjusted data are the percent changes from one month ago.

OFFICE OF PRICES AND LIVING CONDITIONS
W. John Layng, Associate Commissioner

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Subscription price per year $15 domestic, and $18.75 foreign. Single copy $2.25. Send correspondence on circulation and subscription matters (including address changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Fort Royal Road, Springfield, Virginia 22161. Subscription rates: $95 in contiguous U.S. and Hawaii; $110 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Controlled circulation postage paid at Riverdale, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.9 percent before seasonal adjustment in September to 251.7 (1967 = 100). The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also increased 0.9 percent before seasonal adjustment in September to 251.9 (1967 = 100). The CPI-U was 12.7 percent higher and the CPI-W was 12.6 percent higher than in September 1979.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers rose 1.0 percent in September. This compares with an increase of 0.7 percent in August, no change in July, and was about the same as during the second quarter this year. The food and beverage index rose 1.6 percent, the second consecutive large monthly increase. The housing component, which had been the major moderating influence on the CPI during the two previous months rose 0.7 percent in September. Mortgage interest rates continued to decline in September but by substantially less than in July and August. Increases in other categories of consumer spending, particularly apparel and upkeep, transportation, and other goods and services, were larger than in August.

For the 3 months ended in September, the CPI-U rose at a seasonally adjusted annual rate of 7.0 percent. This compares with increases of 18.1 percent during the first quarter and 11.6 percent during the second quarter. The housing component accounted for the slowdown in the third quarter. During the first 9 months of 1980, the CPI-U increased at a seasonally adjusted annual rate of 12.1 percent.

Prices for grocery store foods advanced 1.9 percent in September, following increases of 1.2 and 2.3 percent in July and August, respectively. The index for meats, poultry, fish, and eggs rose 3.5 percent and accounted for about three-fifths of the increase. Beef, pork, and poultry prices all advanced sharply for the third consecutive month. Prices for fresh vegetables and sugar and sweets also rose sharply in September. On the other hand, most other food categories registered smaller increases in September than in August, and the index for dairy products declined 0.1 percent. Prices of the other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.9 and 0.5 percent, respectively.

The housing index rose 0.7 percent in September, largely because of higher shelter costs. The homeownership component advanced in September, following 2 months of declines. Home financing costs continued to decline, but by substantially less than in July and August, as a 1.6 percent drop in mortgage interest rates more than offset a 1.3 percent increase in house prices. (In August, mortgage interest rates dropped 4.3 percent and house prices rose 1.7 percent.) Charges for both property insurance and household maintenance and repairs accelerated in September, following moderate increases in July and August. The index for rent rose 1.0 percent. The index for household furnishings and operations registered the largest increase since March. Prices for household fuels, however, rose moderately

Table B. Percent changes in CPI for Urban Wage Earners and Clerical Workers (CPI-W)

Expenditure category	Seasonally adjusted								Unadjusted
	From preceding month							Compound annual rate 3 months ended September 1980	12 months ended September 1980
	1980								
	March	April	May	June	July	August	September		
All items	1.4	1.0	0.9	0.9	0	0.7	1.0	7.3	12.6
Food and beverages	.9	.7	.5	.5	.9	1.7	1.7	18.3	10.3
Housing	1.6	1.4	1.5	1.9	-.7	.2	.6	.1	14.1
Apparel and upkeep	1.7	.3	.1	-.3	.5	.7	1.1	9.6	7.1
Transportation	1.7	.6	.2	-.3	.4	.9	1.1	9.8	14.7
Medical care	.9	.8	.6	.4	.8	.8	.9	10.1	11.2
Entertainment	1.6	.8	.5	.7	.4	.7	1.2	9.8	9.4
Other goods and services	.4	.5	.8	.8	.5	.6	1.6	11.2	9.2

for the second consecutive month. Fuel oil prices declined 0.1 percent, and charges for gas and electricity rose 0.7 percent.

The transportation component increased 1.2 percent in September, the largest monthly increase since March. Used car prices, which had been running below year earlier levels during most of this year, rose a sharp 5.6 percent. New car prices rose less in September than in August, 1.0 percent as compared with 1.7 percent. The index for public transportation rose 3.6 percent, reflecting large increases in airline and intercity bus fares. Gasoline prices declined for the fifth consecutive month.

The index for apparel and upkeep rose 1.3 percent in September, following substantially smaller increases in the preceding 5 months. Prices of most apparel commodities increased substantially in September, reflecting the continued introduction of fall and winter wear. The index for apparel services advanced 0.8 percent in September as charges for laundry and dry cleaning rose 1.2 percent.

The medical care index advanced 0.8 percent in September. Charges for hospital and other medical care services rose 1.3 percent, following increases of 1.5 percent in both July and August, while charges for professional services rose 1.0 percent. The index for medical care commodities registered its smallest increase this year—0.6 percent.

The index for entertainment rose 1.0 percent in September, largely due to a 4.3 percent increase in the index for magazines, periodicals, and books. The index for other goods and services registered a 1.9 percent increase. Higher prices for school tuition—up 10.2 percent—and school books and supplies accounted for most of the increase.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 1.0 percent in September, following an increase of 0.7 percent in August and no change in July. A 1.7 percent rise in the food and beverage index was the second consecutive large increase. The housing component, which had been the major moderating influence on the CPI during the previous 2 months, rose 0.6 percent in September. Mortgage interest rates continued to decline in September but by substantially less than in July and August. Increases in other categories of consumer spending, particularly apparel and upkeep, transportation, and other goods and services, were larger than in August.

Prices for grocery store foods advanced 2.0 percent in September, following increases of 1.1 and 2.2 percent in July and August, respectively. The index for meats, poultry, fish, and eggs rose 3.8 percent and accounted for about three-fifths of the increase. Beef, pork, and poultry prices all advanced sharply for the third consecutive month. Prices for fresh vegetables and sugar and sweets also rose sharply in September. On the other hand, most other food categories registered smaller increases in September than in August, and the index for dairy products declined 0.3 percent.

The housing index rose 0.6 percent in September, largely because of higher shelter costs. The homeownership component advanced in September, following 2 months of declines. Home financing costs continued to decline as a 1.5 percent drop in mortgage interest rates more than offset a 1.4 percent increase in house prices. Property insurance costs accelerated in September, following moderate increases in July and August. The index for rent—up 0.9 percent—registered the largest monthly increase this quarter. Prices for household fuels, however, rose moderately for the second consecutive month. Fuel oil prices declined 0.1 percent and charges for gas and electricity rose 0.6 percent.

The transportation component increased 1.1 percent in September, the largest monthly increase since March. Used car prices, which had been running below year earlier levels during most of this year, rose 5.6 percent. New car prices rose less in September than in August, 1.0 percent as compared with 1.7 percent. The index for public transportation rose 2.9 percent, reflecting large increases in airline and intercity bus fares. Gasoline prices declined for the sixth consecutive month.

The index for apparel and upkeep rose 1.1 percent in September, following substantially smaller increases in the preceding 5 months. Prices of most apparel commodities increased substantially in September, reflecting the continued introduction of fall and winter wear.

The medical care index advanced 0.9 percent in September. Charges for hospital and other medical care services rose 1.1 percent, following increases of 1.8 and 1.7 percent in July and August, respectively. Charges for professional services rose 1.0 percent. The index for medical care commodities increased 0.7 percent.

The index for entertainment rose 1.2 percent in September, largely due to a 4.5 percent increase in the index for magazines, periodicals, and books. The index for other goods and services registered a 1.6 percent increase. Higher prices for school tuition—up 10.3 percent—and school books and supplies accounted for most of the increase.

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

---

[1] Areas priced on pricing schedule 2 (See table 13) will appear next month.

[2] Indexes on an October 1967 = 100 base unless otherwise indicated.

[3] Indexes on a November 1977 = 100 base unless otherwise indicated.

[4] The 1957-59 = 100 base is not available for Anchorage, Alaska and Denver-Boulder, Colo.; index for Anchorage, Alaska is on a May-October 1969 = 100 base; index for Denver-Boulder, Colo. is on a January 1964 = 100 base.

[5] Index on a June 1978 = 100 base in Miami, Fla.; formerly on a November 1977 = 100 base.

[6] Indexes on a June 1978 = 100 base in Cincinnati, Ohio-Ky.-Ind. and Miami, Fla.; formerly on the bases listed in footnote 6. Index on a January 1978 = 100 base in Denver-Boulder, Col.

[7] Indexes are on the bases listed:

Anchorage, Alaska	January 1978 = 100.
Baltimore, Md	March 1978 = 100.
Boston, Mass	January 1978 = 100.
Cincinnati, Ohio-Ky.-Ind	March 1978 = 100.
Denver-Boulder, Colo	January 1978 = 100.
Miami, Fla	November 1977 = 100.
Milwaukee, Wis	November 1977 = 100.
Northeastern Pennsylvania	November 1977 = 100.
Portland, Oreg.-Wash	January 1978 = 100.
St. Louis, Mo.-Ill	March 1978 = 100.
San Diego, Calif	November 1977 = 100.
Seattle-Everett, Wash	November 1977 = 100.
Washington, D.C.-Md.-Va	November 1977 = 100.

[8] Indexes on a June 1978 = 100 base; formerly on the bases listed in footnote 6.

[9] The 1957-59 = 100 base is not available for San Diego, Calif.; index is on a February 1965 = 100 base.

[10] Index is on an April 1967 = 100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[11] Index on a June 1978 = 100 base in San Diego, Calif.; formerly on a November 1977 = 100 base.

[na] Data not adequate for publication.

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from over 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, nospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 22 percent, for example, is shown as 122.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $12.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), and *Revisions in the Medical Care Service component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change

CPI	236.4
Less previous index	233.2
Equals index point change:	3.2

Percent Change

Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1976 through 1980 will be replaced at the end of 1980. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components.

Explanation of Homeownership Measures

Official CPI-U includes five components.(1) The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home, and the total amount of interest expected to be paid over half the stated life of the mortgage. (2) Current monthly prices are used for each of these components.

Experimental Measure X-1: (1) The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. (2) Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: (1) The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owed and the equity component is the amount owned, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. (2) Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: (1) The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowners population. (2) The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3, uses past and current mortgage interest costs in a 15-year weighted moving average, which reflects the base period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) The prices used for each of these items are current ones.

Experimental Measure X-5: (1) The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) Current prices are used in X-5 except for mortgage interest which uses the 15-year moving average also used in the X-3.

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Subscription price per year $15 domestic, and $18.75 foreign. Single copy $2.25. Send correspondence on circulation and subscription matters (including address changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Fort Royal Road, Springfield, Virginia 22161. Subscription rates: $95 in contiguous U.S. and Hawaii; $110 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Controlled circulation postage paid at Riverdale, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.9 percent before seasonal adjustment in October to 253.9 (1967 = 100). The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also increased 0.9 percent before seasonal adjustment in October to 254.1 (1967 = 100). Both the CPI-U and the CPI-W were 12.6 percent higher than in October 1979.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers rose 1.0 percent in October, the same as in September. About three-fifths of the October increase was due to a rise in the housing component, which increased 1.3 percent following a slight increase in the 3-month period ended in September. The index for food and beverages continued to advance but by much less than in August or September. Nearly all other major categories of consumer spending also registered more moderate rates of increase in October than in September.

Rising shelter costs accounted for most of the 1.3 percent increase in the housing component of the CPI in October. Home financing costs rose 3.8 percent, reflecting an increase of 1.5 percent in house prices and 1.9 percent in mortgage interest rates. The October advance in mortgage interest rates followed substantial declines in each of the preceding 3 months. Property insurance costs rose 1.1 percent in October, following a 1.2 percent increase in September. The index for rent increased 1.0 percent, the same as in September. Prices for household fuels declined 0.5 percent in October, following moderate increases in both August and September. Fuel oil prices declined 0.7 percent, and charges for gas and electricity declined 0.4 percent.

Prices for grocery store foods advanced 0.8 percent in October, following substantially larger increases in each of the preceding 3 months. Smaller increases in prices for pork and poultry and price declines for fresh fruits and vegetables and beef were largely responsible for the moderation. On the other hand, the index for cereal and bakery products advanced sharply—up 1.4 percent in October. Retail prices for sugar and artificial sweeteners rose 4.6 percent in October. Prices of the other 2 components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.7 and 0.3 percent, respectively.

The transportation component increased 0.8 percent in October, following a 1.2 percent increase in September. Used car prices rose 5.5 percent in October, following a 5.6 percent increase in September. Gasoline prices, which had declined for 5 consecutive months, rose 0.3 percent, following seasonal adjustment. On the other hand, new car prices declined 1.5 percent, following a 1.0 percent rise in September. The 1981 model cars were included in the CPI for the first time in October and will continue to be phased into the index over the next several months. (For a report on quality change for 1981 cars, see news release USDL 80-703,

Medical care	.8	.6	.4	.8	.8	.9	.8	10.2	11.0
Entertainment	.8	.5	.7	.4	.7	1.2	.5	10.4	9.3
Other goods and services	.5	.8	.8	.5	.6	1.6	.3	10.5	9.2

dated November 7, 1980.) The index for public transportation continued to advance but by less than in recent months. Charges for airfares rose 1.5 percent.

The index for apparel and upkeep rose 0.5 percent in October, following a 1.3 percent increase in September. A decline in prices for women's and girls' clothing, reflecting early fall sales, was primarily responsible for the smaller increase. Prices for footwear, however, continued to increase sharply in October—up 1.0 percent—the same as in September. The index for apparel services increased 1.1 percent, the largest increase since April.

The medical care component increased 0.8 percent in October, the same as in September. Charges for hospital rooms and physicians' services rose 1.8 and 0.7 percent, respectively. The index for medical care commodities continued to increase at about the same rate as during the first 9 months.

The indexes for entertainment and other goods and services rose 0.5 and 0.3 percent, respectively, in October, following increases of 1.0 and 1.9 percent in September.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 1.0 percent in October, the same as in September. About one-half of the October increase was due to a rise in the housing component, which increased 1.3 percent following a slight increase in the 3-month period ended in September. On the other hand, the index for food and beverages continued to advance but by much less than in August or September. Most other major categories of consumer spending also registered more moderate rates of increase in October than in September.

Rising shelter costs accounted for most of the 1.3 percent increase in the housing component of the CPI in October. Home financing costs rose 3.8 percent, reflecting an increase of 1.6 percent in house prices and 1.7 percent in mortgage interest rates. The October advance in mortgage interest rates followed substantial declines in each of the preceding 3 months. Property insurance costs rose 1.4 percent in October, following a 1.3 percent increase in September. The index for rent increased 1.0 percent. Prices for household fuel declined 0.5 percent in October, following moderate increases in both August and September. Fuel oil prices declined 0.7 percent, and charges for gas and electricity declined 0.4 percent.

Prices for grocery store foods advanced 0.8 percent in October, following substantially larger increases in each of the preceding 3 months. Smaller increases in prices for pork and poultry and price declines for fresh fruits and vegetables and beef were largely responsible for the moderation. On the other hand, the index for cereal and bakery products advanced sharply—up 1.3 percent in October. Retail prices for sugar and artificial sweeteners rose 4.9 percent in October.

The transportation component increased 0.7 percent in October, following a 1.1 percent increase in September. Used car prices rose 5.5 percent in October, following a 5.6 percent increase in September. Gasoline prices, which had declined for 6 consecutive months, rose 0.4 percent, following seasonal adjustment. On the other hand, new car prices declined 2.3 percent, following a 1.0 percent increase in September. The index for public transportation continued to advance, but by much less than in recent months.

The index for apparel and upkeep rose 0.4 percent in October, following a 1.1 percent increase in September. A decline in prices for women's and girls' clothing, reflecting early fall sales, was primarily responsible for the smaller increase. The index for apparel services, however, increased 1.5 percent, the largest increase since May.

The medical care component increased 0.8 percent in October, about the same as in recent months. Charges for hospital rooms and physicians' services rose 1.9 and 0.5 percent, respectively. The index for medical care commodities continued to increase at about the same rate as during the first 9 months.

The indexes for entertainment and other goods and services rose 0.5 and 0.3 percent, respectively, in October, following increases of 1.2 and 1.6 percent in September.

West/D	2	12/77	-	135.4	-	136.9	11.5	1.1	-	-	-	-

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[R] Revised.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas on pricing schedule 1 (See table 13) will appear next month.

[2] For the following areas the 1957-59 = 100 base is not available; indexes are on the bases listed:

Buffalo, N. Y.	November 1963 = 100.
Dallas-Fort Worth, Tex.	November 1963 = 100.
Honolulu, Hawaii	December 1963 = 100.

[3] Indexes on a June 1978 = 100 base; formerly on the bases listed in footnote 4, except in Buffalo, N.Y. where 1967 = 100.

[4] Indexes are on the bases listed:

Atlanta, Ga.	December 1977 = 100.
Buffalo, N. Y.	February 1978 = 100.
Cleveland, Ohio	February 1978 = 100.
Dallas-Fort Worth, Tex.	February 1978 = 100.
Honolulu, Hawaii	December 1977 = 100.
Houston, Tex.	April 1978 = 100.
Kansas City, Mo.-Kans.	December 1977 = 100.
Minneapolis-St. Paul, Minn.-Wis.	April 1978 = 100.
Pittsburgh, Pa.	April 1978 = 100.
San Francisco-Oakland, Calif.	December 1977 = 100.

[5] Indexes on a June 1978 = 100 base; formerly on the bases listed in Footnote 4.

[6] Indexes on a June 1978 = 100 base; formerly on the bases listed in footnote 4, except in Minneapolis-St. Paul, Minn.-Wis. where 1967 = 100.

[NA] Data not adequate for publication.

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[R] Revised.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas on pricing schedule 1 (See table 18) will appear next month.

[2] For the following areas the 1957-59 = 100 base is not available; indexes are on the bases listed:

Buffalo, N. Y.	November 1963 = 100.
Dallas-Fort Worth, Tex.	November 1963 = 100.
Honolulu, Hawaii	December 1963 = 100.

[3] Indexes on a June 1978 = 100 base; formerly on the bases listed in footnote 4, except in Buffalo, N.Y. where 1967 = 100.

[4] Indexes are on the bases listed:

Atlanta, Ga.	December 1977 = 100.
Buffalo, N. Y.	February 1978 = 100.
Cleveland, Ohio	February 1978 = 100.
Dallas-Fort Worth, Tex.	February 1978 = 100.
Honolulu, Hawaii	December 1977 = 100.
Houston, Tex.	April 1978 = 100.
Kansas City, Mo.-Kans.	December 1977 = 100.
Minneapolis-St. Paul, Minn.-Wis.	April 1978 = 100.
Pittsburgh, Pa.	April 1978 = 100.
San Francisco-Oakland, Calif.	December 1977 = 100.

[5] Indexes on a June 1978 = 100 base; formerly on the bases listed in Footnote 4.

[6] Indexes on a June 1978 = 100 base; formerly on the bases listed in footnote 4, except in Minneapolis-St. Paul, Minn.-Wis. where 1967 = 100.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

[NA] Data not adequate for publication.

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[NA] Data not adequate for publication.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from over 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 22 percent, for example, is shown as 122.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $12.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), and *Revisions in the Medical Care Service component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	**236.4**
Less previous index	**233.2**
Equals index point change:	**3.2**
Percent Change	
Index point difference	**3.2**
Divided by the previous index	**233.2**
Equals:	**0.014**
Results multiplied by one hundred	**0.014x100**
Equals percent change:	**1.4**

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1976 through 1980 will be replaced at the end of 1980. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components.

Explanation of Homeownership Measures

Official CPI-U includes five components.(1) The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home, and the total amount of interest expected to be paid over half the stated life of the mortgage. (2) Current monthly prices are used for each of these components.

Experimental Measure X-1: (1) The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. (2) Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: (1) The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owed and the equity component is the amount owned, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. (2) Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: (1) The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowners population. (2) The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3, uses past and current mortgage interest costs in a 15-year weighted moving average, which reflects the base period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) The prices used for each of these items are current ones.

Experimental Measure X-5: (1) The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) Current prices are used in X-5 except for mortgage interest which uses the 15-year moving average also used in the X-3.

24 Hour CPI Mailgram Service

Consumer Price Index data now are available by mailgram within 24 hours of the CPI release. The new service is being offered by the Bureau of Labor Statistics through the National Technical Information Service of the U.S. Department of Commerce.

The CPI MAILGRAM service provides unadjusted and seasonally adjusted U.S. City Average data both for the All Urban Consumers (CPI-U) and for the Urban Wage Earners and Clerical Workers (CPI-W) Indexes as shown on the CPI-U sample page below. The unadjusted data include the current month's index and the percent changes from 12 months ago and one month ago. The seasonally adjusted data are the percent changes from one month ago.

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Subscription price per year $15 domestic, and $18.75 foreign. Single copy $2.25. Send correspondence on circulation and subscription matters (including address changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Fort Royal Road, Springfield, Virginia 22161. Subscription rates: $95 in contiguous U.S. and Hawaii; $110 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Controlled circulation postage paid at Riverdale, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.9 percent before seasonal adjustment in November to 256.2 (1967 = 100). The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also increased 0.9 percent before seasonal adjustment in November to 256.4 (1967 = 100). The CPI-U was 12.6 percent higher and the CPI-W was 12.7 percent higher than in November 1979.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers rose 1.0 percent in November, the same as in the 2 preceding months. The housing, transportation, and food and beverage components all registered substantial increases and accounted for over nine-tenths of the November increase in the CPI. Increases in most other major categories of consumer spending were smaller than in October.

Rising shelter costs accounted for most of the 1.0 percent increase in the housing component in November. Home financing costs rose 3.9 percent, reflecting increases of 2.7 percent in mortgage interest rates and 0.7 percent in house prices. The November increase in mortgage interest rates was the second consecutive advance, following substantial declines last summer. Property insurance costs rose 1.2 percent, about the same as in September and October. The index for rent rose 0.6 percent, compared with increases of 1.0 percent in each of the previous 2 months. Prices for household fuels declined 1.1 percent in November, following a decline of 0.5 percent in October. A decrease of 2.1 percent in charges for gas and electricity was partially offset by a 1.4 percent increase in fuel oil prices.

The food and beverage component rose 1.1 percent in November compared with 0.7 percent in October. Beef prices rose 0.8 percent, following a 0.6 percent decline in October. Prices for pork, fish and seafood, and eggs all registered substantial increases in November. On the other hand, poultry prices declined 1.0 percent, following substantial increases in each of the preceding 4 months. Prices for fresh fruits and vegetables increased 0.9 percent in November, following a 2.8 percent decline in October. The 1.3 percent increase in other foods at home was largely due to a 7.9 percent increase in sugar and artificial sweeteners and higher prices for soft drinks. Prices of the other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 1.0 and 0.3 percent, respectively.

The transportation component increased 1.3 percent in November, following a 0.8 percent rise in October. Increases in prices for used cars, new cars, gasoline, and automobile finance charges were primarily responsible for the advance. Used car prices increased 5.1 percent, the third consecutive large monthly increase. Gasoline prices rose 0.9 percent, following seasonal adjustment, compared with a 0.3 percent increase in October and declines in each of the preceding 5 months. New car prices rose slightly after declining 1.5 percent in October. Automobile finance charges advanced sharply—up 3.0 percent in November. The index for public

transportation increased 1.2 percent in November as charges for airfares rose 2.2 percent.

The index for apparel and upkeep increased 0.3 percent in November, following a rise of 0.5 percent in October. Increases in prices for infants' and toddlers' clothing and jewelry and luggage accounted for most of the increase. Prices of other clothing items and footwear showed little change on average in November. Charges for apparel services rose 0.8 percent, following a 1.1 percent increase in October.

The medical care component increased 0.6 percent in November, the smallest increase since June. The indexes for entertainment and other goods and services rose 0.3 and 0.6 percent, respectively, in November, following increases of 0.5 and 0.3 percent in October.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 1.0 percent in November, the same as in the 2 preceding months. The housing, transportation, and food and beverage components all registered substantial increases and accounted for over nine-tenths of the November increase in the CPI.

Rising shelter costs accounted for most of the 1.0 percent increase in the housing component in November. Home financing costs rose 4.1 percent, reflecting increases of 2.8 percent in mortgage interest rates and 0.7 percent in house prices. The November increase in mortgage interest rates was the second consecutive advance, following substantial declines in each of the preceding 3 months. Property insurance costs rose 1.0 percent, the third consecutive large monthly increase. Prices for household fuels declined 1.1 percent in November, following a decline of 0.5 percent in October. A decrease of 2.0 percent in charges for gas and electricity was partially offset by a 1.5 percent increase in fuel oil prices.

The food and beverage component rose 1.1 percent in November compared with 0.9 percent in October. Beef prices rose 0.6 percent, following a 0.6 percent decline in October. Prices for pork, fish and seafood, and eggs all registered substantial increases in November. On the other hand, poultry prices declined 1.0 percent, following substantial increases in each of the preceding 4 months. The 1.5 percent increase in other foods at home was largely due to a 7.8 percent increase in sugar and artificial sweeteners and higher prices for soft drinks. Prices for fresh fruits and vegetables increased 0.8 percent in November, following a 3.0 percent decline in October.

The transportation component increased 1.5 percent in November, following a 0.7 percent rise in October. Increases in prices for used cars, new cars, gasoline, and automobile finance charges were primarily responsible for the advance. Used car prices increased 5.1 percent, the third consecutive large monthly increase. Gasoline prices rose 0.8 percent, following seasonal adjustment, compared with a 0.4 percent increase in October and declines in each of the preceding 6 months. New car prices rose 0.5 percent after declining 2.3 percent in October. Automobile finance charges advanced sharply—up 3.3 percent in November.

The index for apparel and upkeep increased 0.1 percent in November, following a rise of 0.4 percent in October. Increases in prices for men's and boys' clothing accounted for most of the increase.

The medical care component increased 0.7 percent in November, and the indexes for entertainment and other goods and services rose 0.5 and 0.6 percent, respectively.

West/D	2	12/77	135.4	–	136.9	–	–	–	–	11.5	1.1	–

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

South/D	1.2	1.4	.8	1.1	-.4	2.2
West/D	1.2	1.7	.3	1.3	.8	2.1

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

---

[1] Areas priced on pricing schedule 2 (See table 13) will appear next month.

[2] Indexes on an October 1967 = 100 base unless otherwise indicated.

[3] Revised indexes for September 1980

All items	267.3
All items(January 1964 = 100)	284.7
Housing	311.3
Fuel and other utilities	268.0
Fuels	380.6
Gas (piped) and electricity	384.7
Services	306.8
All items less shelter	236.0
All items less medical care	267.8
Energy	179.7
Services less rent	326.2
Services less medical care	309.2

[4] Indexes on a November 1977 = 100 base unless otherwise indicated.

[5] The 1957-59 = 100 base is not available for Anchorage, Alaska and Denver-Boulder, Colo.; index for Anchorage, Alaska is on a May-October 1969 = 100 base; index for Denver-Boulder, Colo. is on a January 1964 = 100 base.

[6] Index on a June 1978 = 100 base in Miami, Fla.; formerly on a November 1977 = 100 base.

[7] Indexes on a June 1978 = 100 base in Cincinnati, Ohio-Ky.-Ind. and Miami, Fla.; formerly on the bases listed in footnote 6. Index on a January 1978 = 100 base in Denver-Boulder, Col.

[8] Indexes are on the bases listed :

Anchorage, Alaska	January 1978 = 100.
Baltimore, Md	March 1978 = 100.
Boston, Mass	January 1978 = 100.
Cincinnati, Ohio-Ky.-Ind	March 1978 = 100.
Denver-Boulder, Colo	January 1978 = 100.
Miami, Fla	November 1977 = 100.
Milwaukee, Wis	November 1977 = 100.
Northeastern Pennsylvania	November 1977 = 100.
Portland, Oreg.-Wash	January 1978 = 100.
St. Louis, Mo.-Ill	March 1978 = 100.
San Diego, Calif	November 1977 = 100.
Seattle-Everett, Wash	November 1977 = 100.
Washington, D.C.-Md.-Va	November 1977 = 100.

[9] Indexes on a June 1978 = 100 base; formerly on the bases listed in footnote 6.

[10] The 1957-59 = 100 base is not available for San Diego, Calif.; index is on a February 1965 = 100 base.

[11] Index is on an April 1967 = 100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[12] Index on a June 1978 = 100 base in San Diego, Calif.; formerly on a November 1977 = 100 base.

[NA] Data not adequate for publication.

---

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

---

[1] Areas priced on pricing schedule 2 (See table 18) will appear next month.

[2] Indexes on an October 1967 = 100 base unless otherwise indicated.

[3] Revised indexes for September 1980

All items	271.6
All items(January 1964 = 100)	289.2
Housing	315.6
Fuel and other utilities	267.3
Fuels	378.8
Gas (piped) and electricity	384.7
Services	312.1
All items less shelter	239.8
All items less medical care	271.8
Energy	178.5
Services less rent	333.8
Services less medical care	313.3

[4] Indexes on a November 1977 = 100 base unless otherwise indicated.

[5] The 1957-59 = 100 base is not available for Anchorage, Alaska and Denver-Boulder, Colo.; index for Anchorage, Alaska is on a May-October 1969 = 100 base; index for Denver-Boulder, Colo. is on a January 1964 = 100 base.

[6] Index on a June 1978 = 100 base in Miami, Fla.; formerly on a November 1977 = 100 base.

[7] Indexes on a June 1978 = 100 base in Cincinnati, Ohio-Ky.-Ind. and Miami, Fla.; formerly on the bases listed in footnote 6. Index on a January 1978 = 100 base in Denver-Boulder, Col.

[8] Indexes are on the bases listed :

Anchorage, Alaska	January 1978 = 100.
Baltimore, Md.	March 1978 = 100.
Boston, Mass.	January 1978 = 100.
Cincinnati, Ohio-Ky.-Ind.	March 1978 = 100.
Denver-Boulder, Colo.	January 1978 = 100.
Miami, Fla.	November 1977 = 100.
Milwaukee, Wis.	November 1977 = 100.
Northeastern Pennsylvania	November 1977 = 100.
Portland, Oreg.-Wash.	January 1978 = 100.
St. Louis, Mo.-Ill.	March 1978 = 100.
San Diego, Calif.	November 1977 = 100.
Seattle-Everett, Wash.	November 1977 = 100.
Washington, D.C.-Md.-Va.	November 1977 = 100.

[9] Indexes on a June 1978 = 100 base; formerly on the bases listed in footnote 6.

[10] The 1957-59 = 100 base is not available for San Diego, Calif.; index is on a February 1965 = 100 base.

[11] Index is on an April 1967 = 100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[12] Index on a June 1978 = 100 base in San Diego, Calif.; formerly on a November 1977 = 100 base.

[NA] Data not adequate for publication.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from over 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 22 percent, for example, is shown as 122.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $12.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), and *Revisions in the Medical Care Service component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	236.4
Less previous index	233.2
Equals index point change:	3.2
Percent Change	
Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1976 through 1980 will be replaced at the end of 1980. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components.

Explanation of Homeownership Measures

Official CPI-U includes five components.(1) The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home, and the total amount of interest expected to be paid over half the stated life of the mortgage. (2) Current monthly prices are used for each of these components.

Experimental Measure X-1: (1) The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. (2) Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: (1) The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owed and the equity component is the amount owned, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. (2) Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: (1) The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowners population. (2) The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3, uses past and current mortgage interest costs in a 15-year weighted moving average, which reflects the base period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) The prices used for each of these items are current ones.

Experimental Measure X-5: (1) The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) Current prices are used in X-5 except for mortgage interest which uses the 15-year moving average also used in the X-3.

24 Hour CPI Mailgram Service

Consumer Price Index data now are available by mailgram within 24 hours of the CPI release. The new service is being offered by the Bureau of Labor Statistics through the National Technical Information Service of the U.S. Department of Commerce.

The CPI MAILGRAM service provides unadjusted and seasonally adjusted U.S. City Average data both for the All Urban Consumers (CPI-U) and for the Urban Wage Earners and Clerical Workers (CPI-W) Indexes as shown on the CPI-U sample page below. The unadjusted data include the current month's index and the percent changes from 12 months ago and one month ago. The seasonally adjusted data are the percent changes from one month ago.

BUREAU OF LABOR STATISTICS
Janet L. Norwood, Commissioner

OFFICE OF PRICES AND LIVING CONDITIONS
W. John Layng, Associate Commissioner

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Subscription price per year $15 domestic, and $18.75 foreign. Single copy $2.25. Send correspondence on circulation and subscription matters (including address changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Fort Royal Road, Springfield, Virginia 22161. Subscription rates: $95 in contiguous U.S. and Hawaii; $110 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Controlled circulation postage paid at Riverdale, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.9 percent before seasonal adjustment in December to 258.4 (1967 = 100). The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also increased 0.9 percent before seasonal adjustment in December to 258.7 (1967 = 100). The CPI-U was 12.4 percent higher and the CPI-W was 12.5 percent higher than in December 1979.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers rose 1.1 percent in December, about the same as in each of the preceding 3 months. The housing, transportation, and food and beverage components all registered substantial increases for the second consecutive month. These components accounted for over nine-tenths of the December increase in the CPI. The index for other goods and services rose substantially, but the increases in the medical care and entertainment components were comparatively small. On the other hand, the index for apparel and upkeep declined.

The housing index increased 1.3 percent in December, largely because of higher shelter costs. Home financing costs rose 4.1 percent, due entirely to an increase in mortgage interest rates as house prices were unchanged in December. The index for household maintenance and repairs rose 1.4 percent. Prices for household fuels increased 1.7 percent in December, following a 1.1 percent decline in November. Fuel oil prices rose 3.4 percent and charges for gas and electricity increased 1.1 percent. The index for household furnishings and operations continued the moderate rate of advance in evidence during the last several months, increasing 0.4 percent in December.

The food and beverage component rose 1.0 percent in December, following an increase of 1.1 percent in November. Prices for grocery store foods increased 1.1 percent. The index for meats, poultry, fish, and eggs advanced 1.4 percent in December as prices for pork, poultry, fish, and eggs all registered substantial increases. On the other hand, beef prices declined 0.9 percent, following a 0.8 percent increase in November. Prices for fresh fruits and vegetables rose 1.0 percent, as a 3.7 percent increase in fresh vegetable prices more than offset a 0.7 percent decline in prices for fresh fruits. Prices for cereals and bakery products, fresh milk, sugar and artificial sweeteners, and peanut butter also registered substantial increases. The indexes for restaurant meals and alcoholic beverages, the other two components of the food and beverage index, rose 1.0 and 0.7 percent, respectively.

The transportation component rose 1.0 percent in December, following a 1.3 percent increase in November. Increases in prices for used cars, gasoline, and automobile finance charges accounted for most of the advance in December. Used car prices rose 3.3 percent, the fifth consecutive large monthly increase. Gasoline prices increased 1.1 percent and charges for automobile financing rose 3.2 percent. On the other hand, new car

prices declined 0.4 percent, following seasonal adjustment. The index for public transportation increased 1.1 percent in December as charges for airline fares rose 1.7 percent and intercity train fares rose 5.7 percent.

The medical care index increased 0.5 percent as charges for medical care services rose 0.4 percent. Charges for physicians' fees and hospital rooms rose 0.8 and 0.7 percent, respectively. The index for medical care commodities rose 0.9 percent in December. The entertainment index rose 0.3 percent in December, the same as in November. The other goods and services component rose 1.0 percent in December, largely due to a 1.7 percent increase in prices for tobacco products and a 1.3 percent increase in toilet goods and personal care appliances.

This index for apparel and upkeep declined 1.0 percent in December. Pre-Christmas sales were largely responsible for the drop. Declines in women's and girls' and men's and boys clothing were partially offset by moderate increases in footwear and infants' and toddlers' clothing. Charges for apparel services rose 0.6 percent, following an increase of 0.8 percent in November.

Summary of annual changes—CPI-U

For the 12 months ended in December 1980, the CPI-U rose 12.4 percent, compared with 13.3 percent in 1979. The advance in 1980 was, like that in 1979, due primarily to the housing and transportation components, which accounted for almost three-fourths of the increase in the CPI. The index for food and beverages rose 10.1 percent in 1980, about the same as in 1979. Most other major categories of consumer spending registered price increases moderately larger than in 1979.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 1.1 percent in December, about the same as in each of the preceding 3 months. The housing, transportation, and food and beverage components all registered substantial increases for the second consecutive month and accounted for over nine-tenths of the December increase in the CPI. The index for other goods and services also rose substantially, but the apparel and upkeep and medical care components registered moderate increases in December. On the other hand, the index for entertainment declined.

The housing index increased 1.4 percent in December, largely because of higher shelter costs. Home financing costs rose 4.0 percent, due to a 4.1 percent increase in mortgage interest rates as house prices declined 0.1 percent in December. The index for household maintenance and repairs rose 1.3 percent. Prices for household fuels increased 1.8 percent in December, following a 1.1 percent decline in November. Fuel oil prices rose 3.5 percent and charges for gas and electricity increased 1.2 percent.

The food and beverage component rose 1.0 percent in December, following an increase of 1.1 percent in November. The index for meats, poultry, fish, and eggs advanced 1.2 percent in December as prices for pork, poultry, and eggs all registered substantial increases. On the other hand, beef prices declined 0.8 percent, following a 0.6 percent increase in November. Prices for fresh fruits and vegetables rose 1.0 percent, as a 4.0 percent increase in fresh vegetable prices more than offset a 2.0 percent decline in prices for fresh fruits. Prices for cereals and bakery products, fresh milk, sugar and artificial sweeteners, and peanut butter also registered substantial increases.

The transportation component rose 1.2 percent in December, following a 1.5 percent increase in November. Increases in prices for used cars, gasoline, and automobile finance charges accounted for most of the advance in December. Used car prices rose 3.3 percent, the fifth consecutive large monthly increase. Gasoline prices increased 1.2 percent and charges for automobile financing rose 3.1 percent. On the other hand, new car prices declined 0.3 percent, following seasonal adjustment.

The index for apparel and upkeep increased 0.2 percent in December. Moderate increases in most apparel commodities were partially offset by a small decline in women's and girls' clothing. Charges for apparel services rose 1.0 percent, following an increase of 0.8 percent in November.

The medical care index increased 0.5 percent as charges for medical care services rose 0.4 percent. Charges for physicians' fees and hospital rooms both rose 0.7 percent. The index for medical care commodities rose 0.9 percent in December. The entertainment index declined 0.1 percent in December, following increases of 0.5 percent in each of the two preceding months. A decline in charges for entertainment services—admissions and fees for participant sports—was largely responsible for the decline. The other goods and services component rose 1.0 percent in December, largely due to a 1.7 percent increase in prices for tobacco products.

South/D	2	12/77	–	134.1	–	136.5	11.4	1.8	–	–	–	–
West/D	2	12/77	–	136.9	–	139.8	12.5	2.1	–	–	–	–

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

---

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas on pricing schedule 1 (See table 13) will appear next month.

[2] For the following areas the 1957-59=100 base is not available; indexes are on the bases listed:

Buffalo, N. Y.................................November 1963=100.
Dallas-Fort Worth, Tex................November 1963=100.
Honolulu, Hawaii..........................December 1963=100.

[3] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 4, except in Buffalo, N.Y. where 1967=100.

[4] Indexes are on the bases listed:

Atlanta, Ga....................................December 1977=100.
Buffalo, N. Y.................................February 1978=100.
Cleveland, Ohio...........................February 1978=100.
Dallas-Fort Worth, Tex................February 1978=100.
Honolulu, Hawaii..........................December 1977=100.
Houston, Tex.................................April 1978=100.
Kansas City, Mo.-Kans................December 1977=100.
Minneapolis-St. Paul, Minn.-Wis..April 1978=100.
Pittsburgh, Pa...............................April 1978=100.
San Francisco-Oakland, Calif......December 1977=100.

[5] Indexes on a June 1978=100 base; formerly on the bases listed in Footnote 4.

[6] Indexes on a June 1978=100 base; formerly on the bases listed in footnote 4, except in Minneapolis-St. Paul, Minn.-Wis. where 1967=100.

[NA] Data not adequate for publication.

West/D	2	12/77	–	136.8	–	139.8	12.3	2.2	–	–	–	–

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

South/D	.7	2.3	.3	1.2	.4	.4
West/D	.4	-.3	1.3	1.1	-.4	-.4

[1] Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

[2] Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

[3] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[1] Areas on pricing schedule 1 (See table 18) will appear next month.

[2] For the following areas the 1957-59 = 100 base is not available; indexes are on the bases listed:

Buffalo, N. Y.................................November 1963 = 100.
Dallas-Fort Worth, Tex.................November 1963 = 100.
Honolulu, Hawaii..........................December 1963 = 100.

[3] Indexes on a June 1978 = 100 base; formerly on the bases listed in footnote 4, except in Buffalo, N.Y. where 1967 = 100.

[4] Indexes are on the bases listed:

Atlanta, Ga...................................December 1977 = 100.
Buffalo, N. Y.................................February 1978 = 100.
Cleveland, Ohio............................February 1978 = 100.
Dallas-Fort Worth, Tex.................February 1978 = 100.
Honolulu, Hawaii..........................December 1977 = 100.
Houston, Tex.................................April 1978 = 100.
Kansas City, Mo.-Kans.................December 1977 = 100.
Minneapolis-St. Paul, Minn.-Wis..April 1978 = 100.
Pittsburgh, Pa...............................April 1978 = 100.
San Francisco-Oakland, Calif......December 1977 = 100.

[5] Indexes on a June 1978 = 100 base; formerly on the bases listed in Footnote 4.

[6] Indexes on a June 1973 = 100 base; formerly on the bases listed in footnote 4, except in Minneapolis-St. Paul, Minn.-Wis. where 1967 = 100.

[NA] Data not adequate for publication.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

Services less medical care	149.1	17.1	4.0	148.2	14.7	1.9	143.9	13.7	2.7	144.4	14.2	4.0

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

NA Data not adequate for publication.

---

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

---

[1] The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

[1] Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

[2] Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from over 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 22 percent, for example, is shown as 122.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1967 to $12.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years,* Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index,* by W. John Layng, reprinted from the *Statistical Reporter,* February 1978, No. 78-5 (U.S. Dept. of Commerce), and *Revisions in the Medical Care Service component of the Consumer Price Index,* by Daniel H. Ginsburg, *Monthly Labor Review,* August 1978.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change

CPI	236.4
Less previous index	233.2
Equals index point change:	3.2

Percent Change

Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1976 through 1980 will be replaced at the end of 1980. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components.

Explanation of Homeownership Measures

Official CPI-U includes five components.(1) The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home, and the total amount of interest expected to be paid over half the stated life of the mortgage. (2) Current monthly prices are used for each of these components.

Experimental Measure X-1: (1) The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. (2) Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: (1) The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owed and the equity component is the amount owned, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. (2) Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: (1) The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowners population. (2) The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3, uses past and current mortgage interest costs in a 15-year weighted moving average, which reflects the base period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) The prices used for each of these items are current ones.

Experimental Measure X-5: (1) The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) Current prices are used in X-5 except for mortgage interest which uses the 15-year moving average also used in the X-3.

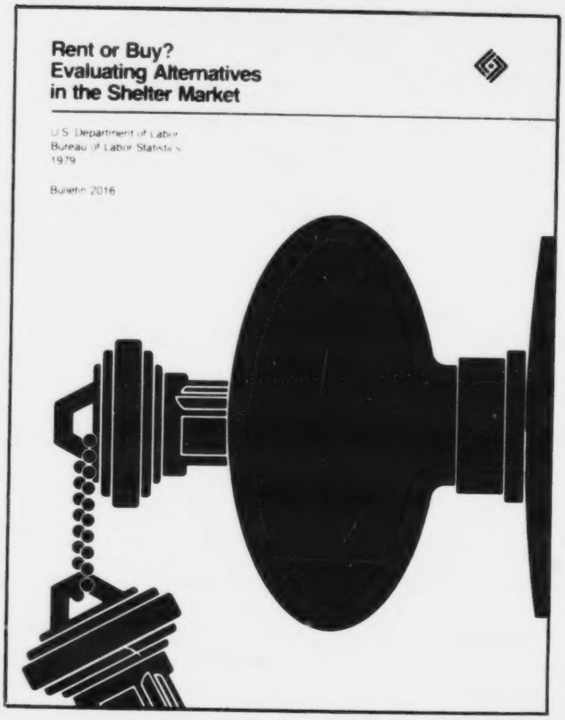
Rent or Buy? Evaluating Alternatives in the Shelter Market



Rent or Buy?
Evaluating Alternatives
in the Shelter Market

U.S. Department of Labor
Bureau of Labor Statistics
1979

Bulletin 2016

"Rent or Buy? Evaluating Alternatives in the Shelter Market" helps a person or family compare the financial aspects of owning and renting shelter suited to their needs. A step-by-step procedure for making the comparison is outlined and fully illustrated. Space is provided to help determine:

- The monthly outlay to own a house of your choosing before and after tax saving from homeownership.
- The proceeds if you were to sell the house after a given period of time.
- The amount you can spend for rent and be as well-off financially after a given period of time as if you bought.

The pamphlet, first issued in 1974, has been updated to depict more recent economic conditions that affect shelter decisions.
